Foreword

This document provides a summary of the workshop on “Mapping existing international social protection statistics and indicators that would contribute to the monitoring of social protection extension through Social Protection Floors (SPFs)”, which was hosted by the International Labour Organization (ILO) in Geneva between 13th and 15th March 2013.

This workshop was organized in line with the inter-agency collaboration which began in 2009 with the launch of the Social Protection Floor Initiative. Since that collaborative work started, a number of issues related to coordination between agencies have been raised. The availability and quality of national social protection data, statistics and indicators were identified early on as a key issue when trying to monitor the extension of social protection at both the national and the global level. More specifically, the importance of social protection data and indicators of coverage, spending and financing was underlined during the Social Protection Inter-Agency Cooperation Board (SPIAC-B) meeting held in New York on 11th February 2013. A key objective of ongoing collaboration between concerned organizations is the harmonisation of international social protection data in order to promote data availability and quality as well as to combine efforts to develop a consistent statistical picture of social protection provision across countries. The workshop hosted by the International Labour Organization (ILO) in Geneva on March 13th, 14th and 15th, 2013 aimed at nurturing SPIAC-B’s future discussions on social protection statistics. It also provided relevant insight that would contribute to the implementation of the ILO Social Protection Floors Recommendation, 2012 (No. 202).

The workshop aimed at fomenting discussion among persons responsible for social protection statistics from various organizations active in this field. It focused on social protection data, statistics and indicators produced or to be produced in order to assess and monitor social protection extension and its contribution to basic income security throughout the life cycle.

The workshop allowed participants to work towards two concrete outputs: a mapping of existing, comparable, internationally collected data and related indicators on social protection (and more specifically its contribution to ensuring basic income security throughout the life cycle) and a reflection on current gaps and possible future joint actions.

We hope that the mapping presented in this document will be useful for nurturing discussions on the monitoring of social protection floors. We also hope that the work which has started at this first workshop will continue towards building a permanent social protection statistics inter-agency working group.

1. Introduction

There is a resurgence of interest in social protection at the global level. The emergence of the SPF concept in the wake of the global crisis has contributed to a growing global recognition of social protection as a central tool in the reduction and prevention of poverty and inequality. Many countries, both developed and developing, have experienced a significant growth in the provision of social protection benefits over recent decades. A number of international and regional organizations have been engaged in the extension of social protection. As a result, a need has arisen for coordination of their actions at the international level, and the SPF Initiative was launched as one of the nine joint initiatives of the United Nations in 2009. The endorsement of the concept by the G20 and the adoption by the ILO of the Social Protection Floors Recommendation, 2012 (No.202) at the International Labour Conference (ILC) in 2012 further highlighted the need for joint efforts to make social protection a reality for all. The creation of the SPIAC-B is in line with this greater demand for collaboration and a joined-up approach between relevant organizations.

Statistics – as well as other information and monitoring indicators - were identified early on as a critical area for collaboration between agencies working on social protection. Data on social protection coverage, level of benefits, expenditure and financing are critical in assessment and monitoring of the state of social protection in and across countries. Identifying gaps and defining policies to expand coverage or to improve effectiveness and efficiency of national social protection systems requires reliable data. Thus, there is a growing recognition of the importance of comprehensive, up to date, comparable and accessible data on social protection; and recognition of current gaps in its availability. As such, an initiative for the harmonization of international social protection statistics was put forward. Its objectives are: to improve the quality of data and statistics; to increase institutional efficiency and to avoid unnecessary duplication. More broadly, its ultimate aim is to develop a consistent statistical picture of social protection provisions both at present and over time across all countries regardless of their development status.

Today, in the field of social protection, agencies collect various qualitative and quantitative information and data and develop indicators that are not necessarily or easily comparable. Indeed, while it would be much needed, there is no consistent or systematic methodology shared by the community of practice regarding the collection of data and information on provision, coverage, cost or impact of social protection. The lack of consistent and systematic data gathering methodology has very concrete and truly damaging consequences both at country and at global levels.

At the national level, social protection is administered by a multitude of actors. Information and data are fragmented and the availability and quality of such data varies across countries, as well as across schemes and programmes within countries. In the absence of coordination mechanisms, many countries face difficulties in assessing current social protection gaps and needs, and changes over time. Coordination requires a shared methodology and agreed principles regarding data to be collected (how to classify and select data, etc.). Without access to a minimum set of social protection data over a sustained time period, countries are not able to take stock and identify gaps to define adequate policy options for social protection. They are even less able to monitor changes, progress and efficiency of social protection provisions over time as well as the capacity of social protection systems to meet national policy objectives and populations' needs.

The issues faced at the national level are echoed at the international level. When data is not collected and aggregated at country level with a clear and consistent methodology, the process of gathering internationally comparable data is difficult and often simply impossible. At the global level, there is a lack of a consistent and readily comparable

methodology for analysing the provision of social protection across countries. Furthermore, the efforts made by the international community to gather such data were not always consistent, and in some cases, resulted in duplication of efforts and inefficiencies.

Thus, the need for the progressive harmonization of social protection data is evident. The harmonization process is associated with developing common standards on: which data to collect, how to classify data and information and how to categorize programmes and benefits in order to ensure comparability of data and the ability to use it for multiple purposes.

Principles and guidelines regarding social protection statistics and indicators resulting from the harmonization process should be taken into account not only by international organizations but primarily by countries. Many countries need international support to enhance their capacity to collect and produce data. One can expect, in the medium to long term, a widespread application of common statistical standards in and by countries, improved data availability in the realm of social protection (comparable, adaptable to various objectives), and ultimately the use of these data to orient and inform policies at the country level.

As a first step in this process, it was identified that there was a need for a complete stocktaking of existing social protection international data and indicators, which was the main objective of the workshop held in Geneva on March 13th, 14th and 15th, 2013. The workshop focused, in line with the ‘life-cycle’ approach taken in ILO Recommendation No. 202¹, on the contribution of social protection to income security for children, persons in active age and persons in old age². The Social Protection Floors Recommendation, 2012 (No. 202) calls explicitly for the monitoring of social protection systems both at national and international levels, which, as detailed above, represents an important challenge.

Conscious of this challenge, representatives from the various organizations gathered at the workshop discussed solutions that would result in positive outcomes at both the national and the international levels. It was suggested that a more permanent social protection statistics and indicators inter-agency working group should be established. Composed of representatives of key development partners working on the collection, analysis and dissemination of social protection data for the purpose of international comparison, the group should develop an integrated and collaborative approach to monitor social protection extension at both national and global levels. Drawing on the existing expertise and resources of relevant organizations and successful experiences of collaboration (see Box 1), the working group should work towards meeting this primary objective of harmonizing international social protection data and developing common standards and guidelines for their implementation.

¹ Social Protection Floors Recommendation, 2012 (No. 202), paragraph 4 (b), (c) and (d), available online at: <http://www.socialsecurityextension.org/gimi/gess/ResShowResource.do?resourceId=31110>.

² The contribution of social protection to ensuring access to essential healthcare, as specified in ILO Recommendation No. 202, paragraph 5 (is dealt with through a separate process in collaboration with the World Health Organization (WHO)).

Box 1
Cooperating on the basis of complementarities: the Eurostat- ILO-OECD collaboration

Over time, Eurostat, the ILO and the OECD have built bridges between their social protection databases (Eurostat ESSPROS, OECD SOCX and ILO social security inquiry³), avoiding duplication in data collection, thanks to an effort to harmonize their respective data classifications. As a result of this successful collaboration, the three organizations have recently begun work with the Asian Development Bank (ADB) on similar issues. This box briefly presents the main milestones over the lifetime of this collaboration so far.

1970s

The European system of integrated social protection statistics (ESSPROS), linked to the System of National Accounts (SNA), is a common framework developed in the late 1970s by Eurostat and the European Union (EU) Member States to provide a coherent comparison between European countries. Through ESSPROS, EUROSTAT defines eight functions of social protection: sickness/health care; disability; old age; survivors; family/children; unemployment; housing; and social exclusion not elsewhere classified. The units of reference are the schemes and then benefits provided by these schemes. The ILO Social Security Inquiry (SSI) follows the same approach and criteria to define schemes and benefits.

1990s

The OECD SOCX database was developed in the 1990s as a tool for monitoring trends in aggregate social expenditure and analyzing changes in its composition. It contains data for 34 OECD countries for the period 1980-2009 and estimates for 2010-2012. The main social policy areas are as follows: old age, survivors, incapacity-related benefits, health, family, active labour market programmes, unemployment, housing, and other social policy areas. The main data source for the 21 European countries is ESSPROS (with the exception of health and active labour market programmes data, which come from two other OECD databases). The process of importing ESSPROS (EUROSTAT) data into SOCX is well established and cooperation is extended to non-expenditure data.

2000s

The ILO social security inquiry methodology was developed as a comprehensive tool for data collection and monitoring. The ILO adopted an extended operational definition of social security which comprises 11 functions or policies: health, disability, old age, survivors, maternity, family/children, unemployment, employment injury, housing, active labour market programmes and general protection against poverty and social exclusion. This definition, fully in line with the ILO Convention no. 102⁴, is relevant for the analysis of evolving social security programmes and compatible with existing statistical methodologies and frameworks (mainly ESSPROS and SOCX). Eurostat data as well as OECD data can be imported into the structure of the ILO social security inquiry and data from SSI can be exported automatically into the OECD structure. Since its creation, SSI has been importing social protection expenditure data from OECD countries, avoiding duplication in the collection of data in this area.

2005-2013

More recently OECD, ILO and ADB have worked together to enhance compatibilities and comparability between data collected by ADB in most Asian countries (part of the Social protection Index database) and OECD and ILO databases. At present, some of ADB data are part of ILO SSI and used by OECD for wider social protection expenditure comparisons.

Future potential collaboration with other organizations includes further harmonization and standardization of social protection data (categorization/ qualification) and data collection tools (among others) in order to improve data comparability, compatibility and quality.

What makes this collaboration technically possible?

- The unit of reference is the benefit level for all three data collectors. Combined with agreed criteria to define benefits, this allows each organization, depending on its own mandate, to use the data collected by others and display it in its own way. The various agencies did not agree on a common definition of social protection. The common unit of reference (benefit level) enables them to identify what elements are part of their respective mandate.
- The qualification, definition of this 'unit of reference', starting from social security functions, type of benefit (in-cash or in-kind; periodic or not; etc.), public or private; mandatory or voluntary, etc). Criteria have to be generic as well as detailed enough to be able to take into account the heterogeneity of situations and developments still to come in the way social protection is and will be provided in developing as well as developed countries.
- The classifications by functions (probably the most critical criteria) are more or less detailed depending on the organization. The ILO classification appears to be the most disaggregated one. The specificity of the ILO mandate in social security and its historical evolution requires that social security in cases of "employment injury" and "maternity" are treated as distinct separate functions. In the European Commission and OECD approaches these are however integrated into other functions (such as maternity income support under the family/children function). Despite these differences, the combination of criteria used to define benefits (periodic or not; in cash or in kind; name of the benefits or category or benefits) allows the disaggregation from a relative aggregated function to two or three specific functions.
- The approach that takes into account existing classifications and favours compatibility and flexibility.

Structure of the workshop

The workshop itself was organized into five main sessions, four sessions dedicated to the mapping of social protection data and indicators and one last session to identify gaps, issues and areas for concrete collaboration. The first session aimed at mapping general/ non age-specific data and indicators while the next three sessions applied the same exercise through the prism of the life cycle, considering social protection for different age groups, namely: children, persons in active age and persons in old age.

In each mapping the same types of data were considered: qualitative data and information, expenditure (and receipts when available), coverage, benefit level, effects and efficiency, and outcome. For each data type, all collected data and related indicators available were listed by organization that produce or compile them (see box 2).

The following chapters present the mapping matrix for each session, providing the first systematic stocktaking of international social protection data and indicators and thus allowing for the identification of gaps, overlaps and areas of collaboration.

Box 2 Mapping method

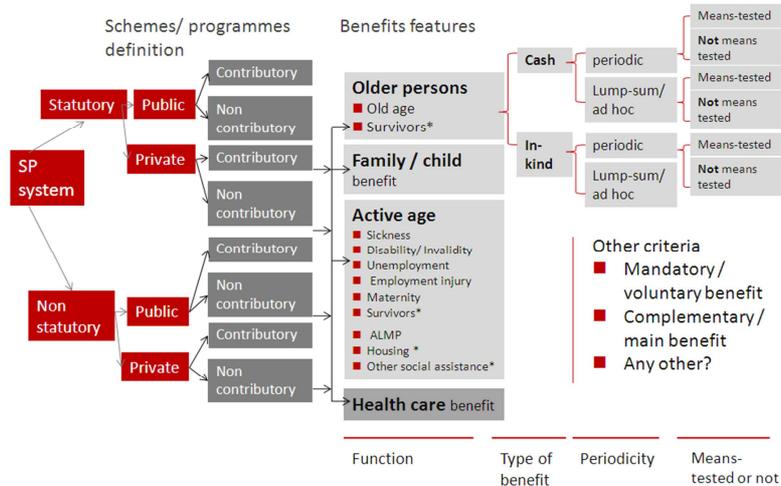

Figure 1 – Example of mapping structure

Data numerator	Definition / classification	Sources	Data denominator	Indicators	Data availability	Responsible organization	Links
2. Receipts							
Total social protection revenue	<p>For each scheme receipts are classified into four categories indicating the type/source of income:</p> <ul style="list-style-type: none"> - Social contributions: from employers and from protected persons - General government contributions; - Transfers from other schemes; - Other receipts. - Total revenue at the national level corresponds to the sum of all schemes revenue/ receipt <p>Disaggregation Social contributions (employers and protected persons), government contributions, transfers to other schemes and other receipts</p> <p>Guidelines ILO social security inquiry manual</p>	<p>Administrative data</p> <p>Process of data collection</p> <ul style="list-style-type: none"> - From national social security schemes - Eurostat ESSPROS for european countries 	GDP Total receipts	No indicators available yet but in development: - Employer, Employees contributions and Government financing as a percentage of GDP - Employers, Employee contribution and government financing as a percentage of total revenue	Data potentially available from 2000-2012 The tool is available for data collection but not yet available for many countries outside Europe	ILO	ILO social security inquiry

The detail of each cell content is as follows:

- **Data numerator:** identifies collected data.
- **Definition/classification:** gives a definition of what is measured. It describes data content and classification, disaggregation (e.g. sex, poor/non poor or characteristics of programmes and benefits such as contributory or non-contributory, means-tested or non-means-tested), methodology used and availability of guidelines. For instance, the ILO, which collects data at both scheme and benefit levels, identifies the following tree for data classification (details on schemes and benefits categorisation can be found in appendix 1):

Figure 2 – ILO tree for data classification

Source: ILO Social Protection department, 2013.

- **Sources:** lists the data sources (for example administrative data, household survey data or other sources; national original sources as well as existing international sources) and includes some information regarding the data collection process (institutionalized or ad-hoc process/sustainability, periodicity), regularity and quality assessment (limitations, ways for improvement).
- **Data denominator:** lists the available denominators. For instance, total social protection expenditure expressed as a share of GDP or as a share of total receipts.
- **Indicators:** lists all available indicators created on the basis of the given data and their measurement objective.
- **Data availability:** details data availability over time and across countries.
- **Responsible organization:** determines the organization currently responsible for data collection or compilation.
- **Links:** identifies the source of the provided information and relevant statistical resources.

2. Session A: Mapping of non age-specific data and indicators

Session A Inter Generational							
	Definition / classification	Sources, including data collection process, regularity, quality assessment (limitations, potential improvements)	Data denominator	Indicators	Data availability	Responsible organization	Links
Qualitative	<p><i>Overview of social protection system</i></p> <p>- Inventory and features of existing programmes and benefits in the country [See also ISSA information below]</p> <p>- Institutional structures, including public, private and mixed; compulsory and voluntary; universal and targeted programmes.</p>	<p>Inventory of national schemes and programmes at the country level as original source.</p> <p>And when available, based on data from existing international sources, including:</p> <ul style="list-style-type: none"> - Eurostat CIRCA qualitative database. - Asian Development Bank social protection index database. 	Qualitative information.	Inventory and description of schemes and benefits in the ILO social security inquiry database.	Available for close to 100 countries (in some cases, partial view of the social protection system).	ILO	The ILO social security inquiry: Inventory and description of schemes and benefits under "scheme information section" http://www.ilo.org/dyn/ilossi/ssimai.n.home
	Inventory and overview of existing schemes, taking into account statutory and non-statutory schemes and institutional structures.	<ol style="list-style-type: none"> 1. 	Comprehensive Food Security and Vulnerability Analysis (CFSVA)	A CFSVA provides a breadth of information on the political, socio-economic and agro-ecological context, food supplies, markets, livelihoods, coping strategies, nutrition, health, education, etc. The analysis: - identifies the root causes of food insecurity and vulnerability; - provides an in-depth profile of food-insecure and vulnerable people, and their livelihoods; - provides an analysis of markets, their functioning and price trends in the country; - includes an analysis of risk (hazards, natural disasters, economic shocks, etc.) and their potential impact on the most vulnerable.	Country level (by project).	n.a.	See country reports.	Since 2003, WFP has completed more than 80 baseline surveys worldwide.	WFP	http://www.wfp.org/food-security/assessments/comprehensive-food-security-vulnerability-analysis
	Crop and Food Security Assessment Missions (CFSAM)	A Crop and Food Security Assessment Mission (CFSAM) is undertaken jointly by the Food and Agriculture Organization (FAO) and WFP, usually for emergencies related to agricultural production or overall food availability problems. It assesses the seriousness of a crisis situation, by looking at the food produced nationally and the extent to which poor people can meet their basic food needs. 2 levels: - Macro level: overall economic situation, agricultural production and market conditions, and the supply and demand situation for staple foods. It estimates the uncovered staple food import requirements for the coming year; - Micro level: analyses the way households access food (for example through their own production, or buying food on the markets). It makes estimates of the access shortfalls and assistance that will be required.	Internal collection of data by WFP and FAO.	n.a.	See country reports.	Country reports available online.	FAO, WFP	http://www.wfp.org/food-security/assessments/crop-food-security-assessment-mission
	The Factory		General and project specific data with a view to operational requirements and donor contributions. This is relevant with regards to spending on WFP supported safety net activities (including school meals, food-for-assets etc).	n.a.	n.a.	n.a.	WFP	http://factory.wfp.org/
	General overview on Food Security analysis	Provides access to the various types of assessment processes presented above.	See above.	n.a.	See above.	See above.	WFP	http://www.wfp.org/food-security

Food supply	Total food supply expressed in calories, fat or proteins.				Food security indicators http://www.fao.org/publications/sofi/food-security-indicators/en/	Time-series records from over 210 countries.	FAO	http://faostat3.fao.org/home/index.html#HOME and the Global Livestock Production and Health Atlas (GLIPHA) http://kids.fao.org/glipha/
	Disaggregation - By region / country; - All food / meat / animal products. Guidelines FAOSTAT methods and standards: http://faostat3.fao.org/home/index.html#META DATA	Process of data collection n.a.						
Policy-decisions	Tracking of food and agriculture policy-decisions relevant to producers, consumers and prices.		FAPDA collects information in different modalities on food and agriculture policy decisions, depending on the needs and capacities at regional and national level.			80 countries, starting from 2008 as a result of high food prices.	FAO	http://www.fao.org/economic/fapda/tool/Main.html
	Disaggregation There is currently no disaggregation of information to gauge key aspects such as coverage, expenditure etc. Guidelines http://www.fao.org/fileadmin/templates/fapda/FAPDA_Policy_Classification.pdf	Process of data collection - Web-based monitoring uses governments' official websites and online sources (particularly in Latin America and the Caribbean, and Asia); - National consultants collect information through purposely designed questionnaires (especially in Northern and Sub-Saharan Africa); - National focal points are nominated by governments in relevant ministries, or based in national policy institutes.* * This last method is used in those countries where the policy monitoring function is endorsed by national authorities who support the establishment of the policy monitoring system at country level.						
6 Effects/ impacts and 'efficiency'								
Poverty headcount reduction	Poverty rates reduction between post and pre-transfers due to cash transfers for social protection (includes income from retirement benefits, pension income, income from insurance and compensation, income from educational scholarships, income from private welfare transfers and income from public welfare transfers. See box II.3 in Social Panorama of Latin America 2009 for more details.	National household surveys.	Total population or sub-groups of the population if specific poverty rates by age groups, area of residence, etc.		Incidence of poverty before and after transfers (Gini coefficient is also available).	17 countries of Latin America and the Caribbean, year: around 2008.	ECLAC	Published in Social Panorama of Latin America 2009 (section II.C): http://www.eclac.org/publicaciones/xml/0/37840/PSI2009-full-text.pdf

Session A Inter Generational								
		Definition / classification	Sources, including data collection process, regularity, quality assessment (limitations, potential improvements)	Data denominator	Indicators	Data availability	Responsible organization	Links
	Monetary poverty	Use relative poverty line (40%-60%) median or mean equivalised income after social transfers.	EU-SILC (household survey data) [http://epp.eurostat.ec.europa.eu/portal/page/portal/microdata/eu_silc]	Total population.	1. At risk of poverty after transfers; 2. At-risk-of-poverty rate before social transfers (pensions included or pension excluded in social transfers) by poverty threshold, age and sex (source: SILC) (ilc_li09).	Years: 1995-2011 European countries.	Eurostat	http://epp.eurostat.ec.europa.eu/portal/page/portal/income_social_inclusion_living_conditions/data/database#
		Disaggregation - Gender; - Including or excluding pensions. Guidelines n.a.	Process of data collection Household survey data.					
	Poverty Headcount reduction (%) Poverty Gap reduction (%) Gini inequality reduction (%) measured by pre-transfer distribution	Simulated change (%) on poverty headcount/poverty gap/inequality of discontinuing a social protection program.	Household survey data List of surveys available on ASPIRE [http://web.worldbank.org/WBSITE/EXTERNAL/TOPICS/EXTSOCIALPROTECTION/EXTSAFETYNETSANDTRANSFERS/0,,contentMDK:23170295~pagePK:148956~piPK:216618~theSitePK:282761,00.html#1c]	Poverty Headcount reduction (%), Poverty Gap reduction (%), Gini inequality reduction (%), measured by post-transfer distribution.	Poverty Headcount reduction (%), Poverty Gap reduction (%), Gini inequality reduction (%).	48 countries. Years: one or several points in time between 2005-2010 (depending on survey availability in countries).	World bank	ASPIRE (http://data.worldbank.org/data-catalog/atlas_social_protection)
		Disaggregation: - By SPL functions (social assistance, social insurance and labour market programs) and by program categories (see ASPIRE classification). Guidelines Definition, composition of indicators available online.	Process of data collection Repository of microdata sets (LSMS + national household survey datasets).					
	Reduction in the poverty gap due to the transfer (simulated poverty gap without the transfer - actual poverty gap)	Reduction in poverty gap obtained for each \$1 spent in social protection programs.	Household survey data List of surveys available on ASPIRE [http://web.worldbank.org/WBSITE/EXTERNAL/TOPICS/EXTSOCIALPROTECTION/EXTSAFETYNETSANDTRANSFERS/0,,contentMDK:23170295~pagePK:148956~piPK:216618~theSitePK:282761,00.html#1c]	Total amount spent in the programme.	Cost-benefit ratio.	48 countries for old age contributory pensions 16 countries for social pensions. Years: one or several points in time between 2005-2010 (depending on survey availability in countries).	World Bank	ASPIRE (http://data.worldbank.org/data-catalog/atlas_social_protection)

7 Basic income security related indicators - outcome indicators								
	Number of poor	Number of the population living in households with per capita consumption expenditure (or per equivalent adult) below the national poverty line.	National household surveys.	Total population or sub-groups of the population if specific poverty rates by age groups, area of residence, etc.	Poverty rates.	Available from World Development Indicators, ECLAC, MDGs database, ADB.	n.a	n.a.
	Aggregate poverty gap per capita	The aggregate poverty gap shows the cost of eliminating poverty by making perfectly targeted transfers to the poor. This indicator considers the total population and the cost of eliminating poverty per capita.	National household surveys.	Absolute value (monetary).	Aggregate poverty gap per capita (Aggregate gap of poverty/population).	Can be calculated based on available poverty gap ratio data (see sources above).	n.a.	n.a.
	Legal minimum wage (contextual rather than outcome)	Legal information on minimum wage as part of the Database of Conditions of Work and Employment Laws.	1. ILO Travail Legal Database; 2. SSA/ISSA: Social Security Programs Throughout the World; Schemes Descriptions.	Absolute value (monetary).	Legal information on minimum wage or minimum wages.	ILO (Travail) - 156 countries.	ILO	ILO/TRAVAIL Minimum wage database: http://www.ilo.org/dyn/travail/travmain.home
	Legal minimum wage (contextual rather than outcome)		1. ILO Travail Legal Database; 2. SSA/ISSA: Social Security Programs Throughout the World; Schemes Descriptions.	Absolute value (monetary).	Legal information on minimum wage or minimum wages.	ISSA country profiles (not systematic, only when directly linked to the benefit calculation formula).	ISSA	ISSA country profiles: http://www.issa.int/Observatory/ContentC84J88ry-Profiles

3. Session B: Mapping of data and indicators related to social protection contribution to income security of children

Session B Children		Total value of family / child benefits						
Data numerator	Definition / classification	Sources: including data collection process, regularity, quality assessment (limitations, potential improvements)	Data denominator	Indicators	Data availability	Responsible organization	Links	
Necessary information								
Qualitative information	Inventory of national schemes and programme providing child benefits or family benefits (either in cash or in kind). Definition of schemes and benefits, contributory or not; public/private; periodic benefits versus lump sum; means tested benefits or not; complementary pension or not).	Inventory of national schemes and programmes at the country level as original source. And when available, based on data from existing international sources, including: - Eurostat CIRCA qualitative database; - Asian Development Bank social protection index database.	Qualitative information.	Inventory and description of schemes and benefits in the ILO social security inquiry database, Qualitative information.	Available for close to 100 countries for the inventory of schemes (in some cases, partial view of the social protection system). Specifically for children, depends on the existence of child benefit programmes at the country level.	ILO	The ILO social security inquiry: Inventory and description of schemes and benefits under "scheme information section" http://www.ilo.org/dyn/ilossi/ssim.ain.home	
	Inventory of national statutory schemes (for which there is a legislative framework) providing family allowances and survivor benefits. Includes information on: -Regulatory Framework; -Definition of schemes and benefits: universal; employment-related; social insurance; social assistance; -Coverage: categorical population groups covered according to legally defined scope -Source of financing: contribution rates from insured persons, self-employed persons, employers and government; -Qualifying conditions: Citizenship/residency requirements; minimum contribution/qualifying periods; - Benefit formulas; -Administrative organization.	SSA/ ISSA (Collaborative effort by the United States Social Security Administration and the International Social Security Association): Social Security Programs Throughout the World; ISSA Schemes Descriptions. Based on administrative data (survey of social security institutions) for four regions: Europe, Africa, Asia-Pacific and the Americas. Each regional volume is updated every two years, with surveys carried out on a staggered basis (one region updated every six months). Response rate for 2011/12 ranged from 88%-100%.	Qualitative information.	See definition.	170+ countries.	ISSA	ISSA country profiles: http://www.issa.int/Observatory/Country-Profiles Regional volume: http://www.ssa.gov/policy/docs/pogdesc/ssptw/	
	Availability of services (health care, education, child day care institutions; etc.).	As international sources: OECD family database, UNESCO for education (to be completed).	Qualitative information.	n.a.	n.a.	n.a.	n.a.	
	Context: demographics: proportion of children in total population.	United Nations Population Division. World Population Prospects: The 2010 Revision (New York). Also available from the World Development indicators database.	Total population.	Proportion of the population 0-15 as a percentage of total population Sub-groups and other age limit (0-18) should be considered as well.	Available for most countries.	UN	http://esa.un.org/wpp/	

Session B Children	Total value of family / child benefits						
Data numerator	Definition / classification	Sources: including data collection process, regularity, quality assessment (limitations, potential improvements)	Data denominator	Indicators	Data availability	Responsible organization	Links
1 Expenditure on child/ family benefits (including CCTs...)							
Public expenditure on child/ family benefits	<p>Child beneficiaries from</p> <ul style="list-style-type: none"> - Benefits in cash (periodic and lump) or in-kind; - Means tested or not; - Public schemes; - Contributory or non-contributory schemes. <p>Disaggregation - Social insurance / social assistance.</p> <p>Guidelines The Revised Social Protection Index: Methodology and Handbook, ADB 2012 http://www.adb.org/sites/default/files/spi-handbook.pdf</p>	<p>Administrative data from social security institutions providing pension benefits and provident funds.</p> <p>Process of data collection Rounds of data collection through specific projects (and financing); National correspondent (one per country); Data from each programme (administrative data) or ministries responsible.</p>	GDP, as part of social protection index.	Public social protection expenditure on child / family benefits.	2004-2005/ 2008-2010 Asian countries.	ADB	Not yet available online.
Budget and total expenditure on Conditional cash transfers	<p>Total budget and total expenditure (in national currency and USD) by programme and by year Qualitative information: description, programme components, main references (and links).</p> <p>Disaggregation None.</p> <p>Guidelines None.</p>	<p>Administrative data from responsible social ministries or agencies.</p> <p>Process of data collection Research of official information on Government websites as well as direct contact with staff from responsible ministries or agencies. Data is updated in a continuous manner and it has been validated through the IASPN (Inter-American Social Protection Network).</p>	Mainly absolute figures.	<ul style="list-style-type: none"> - Budget/expenditure as a percentage of GDP; - Budget/ expenditure as a percentage of the annual aggregate resource deficit among the poor/indigent population with respect to the poverty/indigence line (not published in database but included in Social Panorama of Latin America and other publications by ECLAC). 	<p>Years: 2005-2012</p> <p>- Latin America (21 countries).</p>	ECLAC	<p>Programas de Transferencias Condicionadas - CCT expenditure data, periodically updated data from all countries in the LAC region</p> <p>http://dds.cepal.org/bdptc/</p>

Total value of family/child benefits	<p>The benefit shall be-- (a) a periodical payment granted to any person protected having completed the prescribed qualifying period; or (b) the provision to or in respect of children, of food, clothing, housing, holidays or domestic help; or (c) a combination of (a) and (b).</p> <p>Disaggregation: n.a.</p> <p>Guidelines n.a.</p>	<p>Administrative data from social protection programmes providing benefits to children/families.</p> <p>Process of data collection [Not yet sustainable] - Online from social security institution websites (annual and statistical reports), national statistical office (annual yearbook); - National consultant coordinating data collection from the identified social security institutions and programmes; - Joint ADB/ ILO/ OECD project for Asian countries; - Eurostat ESSPROS; - OECD SOCX database.</p>	Average annual wage multiplied by the number of children.	Total value of the benefits granted in accordance with Article 42 (C102) to the persons protected shall be such as to 1.5 per cent of the wage of an ordinary adult male labourer, multiplied by the total number of children of all residents.	85 countries Worldwide.	ILO	http://www.social-protection.org/gimi/gess/RessFileDownload.do?resourceId=29008
Public spending on family benefits	<p>Includes all types of benefits targeting children and families (public, private and fiscal expenditure; all schemes and benefits).</p> <p>- Formal care and education for very young children, notably: a. Public spending on childcare and early education; b. Enrolment in childcare and pre-schools.</p> <p>Disaggregation - Public; private mandatory and private voluntary; - Benefit in kind / benefit in cash.</p> <p>Guidelines OECD SOCX Manual (Compatible with ESSPROS manual).</p>	<p>Administrative data from social protection programmes providing benefits to older persons.</p> <p>Process of data collection: Data from Eurostat ESSPROS for EU countries and national correspondents for OECD non EU countries.</p>	National currency (current and constant prices), Per head (current and constant US\$ PPP), Gross Domestic Product, Gross National Income, Net National Income, Total general government expenditure.	Total, Public, private (mandatory; voluntary) expenditure on old age in % of GDP / GNI/ NNI/ per head at current or constant prices (benefits in kind and cash benefits).	OECD countries (until 2009 or 2011 depending on countries).	OECD	<p>SOCX social spending database: http://www.oecd.org/els/social/expenditure</p> <p>Family database http://www.oecd.org/social/family/database</p> <p>Public spending on family benefits: http://www.oecd.org/els/soc/PF1.1%20Public%20expenditure%20n%20family%20benefits%20-%20231112.xls</p>

Session B Children		Total value of family / child benefits					
Data numerator	Definition / classification	Sources: including data collection process, regularity, quality assessment (limitations, potential improvements)	Data denominator	Indicators	Data availability	Responsible organization	Links
Expenditures in benefits of Family/Child allowances	Should cover cash periodic benefits for family/ child allowances (either contributory or not; means tested or not). Depends on programme mentioned and formulation adopted in national survey questionnaire. Disaggregation n.a. Guidelines Definition, composition of indicators available online.	Household survey data List of surveys available on ASPIRE [http://web.worldbank.org/WBSITE/EXTERNAL/TOPICS/EXTSOCIALPROTECTION/EXTSAFETYNETSANDTRANSFERS/0,,contentMDK:23170295~pagePK:148956~piPK:216618~theSitePK:282761,00.html#1c] Process of data collection Repository of microdata sets (LSMS + national household survey datasets).	n.a.	n.a.	23 countries maximum with information available in microdatasets. Years: one or several points in time between 2005-2010 (depending on survey availability in countries).	World Bank	ASPIRE (http://data.worldbank.org/data-catalog/atlas_social_protection)
Expenditures in benefits of school feeding programme	Should cover benefit in kind (school feeding programmes). Depends on programme mentioned and formulation adopted in national survey questionnaire. Disaggregation n.a. Guidelines Definition, composition of indicators available online.	Household survey data List of surveys available on ASPIRE [http://web.worldbank.org/WBSITE/EXTERNAL/TOPICS/EXTSOCIALPROTECTION/EXTSAFETYNETSANDTRANSFERS/0,,contentMDK:23170295~pagePK:148956~piPK:216618~theSitePK:282761,00.html#1c] Process of data collection Repository of microdata sets (LSMS + national household survey datasets).	n.a.	n.a.	1 country with information available in microdatasets. Year: 2005.	World Bank	ASPIRE (http://data.worldbank.org/data-catalog/atlas_social_protection)
2 Coverage indicators							
2,1 Qualitative statutory information: cash periodic benefit for children type of programme and financing source							
Family/Child allowances Existence of statutory social security provisions, type of programmes, main sources of financing	Focus on cash periodic benefits: family allowances, child grant. Disaggregation: Type of programmes: social insurance, universal, social assistance, employer liability, no statutory provision); Financing sources: contributions (total cost or partial) from employees, employers, self-employed, government). Guidelines None	Legal information: - National legislation; - SSA/ISSA: Social security programs throughout the world. Process of data collection Based on SSA/ISSA: Social Security Programs Throughout the World; Schemes Descriptions (see above). Systematic coding of qualitative information (database on 'social security programmes and mechanisms").	Qualitative information.	Main type of programme [No statutory provision; Employer liability/ employment related; Employer liability and social assistance; Social assistance; Social insurance and social assistance Social insurance; Universal and social assistance; Universal]. Main source of financing [Employees; employer - including coverage of self-employed; government].	Available for most countries. Latest year: 2010/2011.	ILO	Existence and type of programme: http://www.social-protection.org/gimi/gess/ResFileDownload.do?ressourceId=28922 - Main sources of financing http://www.social-protection.org/gimi/gess/ResFileDownload.do?ressourceId=33175

	Session B Children	Total value of family / child benefits							
	Data numerator	Definition / classification	Sources: including data collection process, regularity, quality assessment (limitations, potential improvements)	Data denominator	Indicators	Data availability	Responsible organization	Links	
	Family database	Indicators related to: 1. The structure of families (SF); 2. The labour market position of families (LMF); 3. Public policies for families and children (PF); - General tax/benefit support for families with children which includes: Public spending on family benefits: - Family cash benefits; - Public spending by age of children. - Child-related leave, notably: - Key characteristics of parental leave systems; - Use of childbirth-related leave benefits, by mothers and fathers: - Parental leave replacement rates; - Trends in leave entitlements around childbirth; - Formal care and education for very young children, notably: - Public spending on childcare and early education; - Enrolment in childcare and pre-schools.	Set of indicators (consult website).	Depends on indicators (consult family database online).	Consult family database online.	n.a.	OECD	http://www.oecd.org/social/family/database	
		Disaggregation: n.a. Guidelines n.a.	Process of data collection n.a.				OECD		
2,2	Extent of effective coverage								
	Child social protection beneficiaries	Child beneficiaries from: - Benefits in cash (periodic and lump) or in-kind - Means tested or not - Public schemes - Contributory or not contributory schemes	Administrative programmes from respective programmes.	Children aged 0 to 14 years.	Children beneficiaries as a percentage of child aged 0-14.	Years: 2004-2005; 2008-2010. Asian countries.	ADB	Social protection index database.	
		Disaggregation - Social insurance/social assistance. Guidelines The Revised Social Protection Index: Methodology and Handbook, ADB 2012 http://www.adb.org/sites/default/files/spi-handbook.pdf	Process of data collection Rounds of data collection through specific projects (and financing); National correspondent (one per country); Data from each programme (administrative data) or ministries responsible.						
	Beneficiaries from CCTs (families; individuals)	Households and individuals participating in conditional cash transfer programmes.	Administrative data from responsible social ministries or agencies.	Total number of families Total population	- Percentage of total population benefiting from CCTs; - Percentage of extremely poor population covered; - Percentage of poor population covered (not included in database but published in Social Panorama of Latin America and other ECLAC publications).	Years: 1997-2012. Latin America (21 countries).	ECLAC	Programas de Transferencias Condicionadas - CCT expenditure data, periodically updated data from all countries in the LAC region http://dds.cepal.org/bdptc/	
		Disaggregation None. Guidelines None.	Process of data collection Research of official information on Government websites as well as direct contact with staff from responsible ministries or agencies. Data is updated in a continuous manner and it has been validated through the IASPN (Inter-American Social Protection Network).						

Session B Children		Total value of family / child benefits						
Data numerator	Definition / classification	Sources: including data collection process, regularity, quality assessment (limitations, potential improvements)	Data denominator	Indicators	Data availability	Responsible organization	Links	
Children (living in families) receiving cash periodic benefits for children (family allowances, child allowances, child grants)	Child benefiting from cash periodic benefits (child/ family allowances; child grant): - From public contributory and non-contributory schemes - Either means-tested or non means-tested benefits	Administrative data from social protection schemes providing cash periodic benefits for children and household survey data.	Number of children less than 19, Number of children less than 15.	Percentage of children receiving cash periodic benefits.	Latest year available Process just started (few countries).	ILO	n.a.	
	Disaggregation: Process of data analysis (and compilation) has just started but should ideally be disaggregated by means-tested or non means tested benefits. Guidelines To be developed.	Process of data collection - Social security inquiry; - National social security programmes providing child periodic benefits; - National statistical offices. - Household survey data when beneficiaries from child periodic benefits can be identified.						
Alternative Number of families receiving cash periodic benefits for children (family allowances, child allowances, child grants)	Families benefiting from cash periodic benefits (child/ family allowances; child grant): - From public contributory and non-contributory schemes; - Either means-tested or non means-tested benefits.	Administrative data from social protection schemes providing cash periodic benefits for children and household survey data.	Number of families.	Percentage of families receiving cash periodic benefits for children.	Latest year available Process just started (few countries).	ILO		
	Disaggregation: Process of data analysis (and compilation) has just started but should ideally be disaggregated by means-tested or non means tested benefits. Guidelines n.a.	Process of data collection - Social security inquiry; - National social security programmes providing child periodic benefits; - National statistical offices; - Household survey data when beneficiaries from child periodic benefits can be identified.						
Number of poorest households who received external economic support in the last 3 months	Types of external economic support in the draft questionnaire include both cash transfers and in-kind support (for further disaggregation). Domains and concepts that will be measured are as follows: 1. Cash: i) Cash for work; ii) Cash; 2. In-kind: i) School material; ii) Housing material; iii) Agricultural inputs; 3. Food: i) Food; ii) Food vouchers; iii) School feeding; iv) Food for work.	Household surveys (MICS and DHS).	Total number of poorest households (bottom two wealth quintiles).	Proportion of the poorest households who received external economic support in the last 3 months (Global AIDS Response Progress Reporting (GARPR) (formerly UNGASS) indicator #7.4).	The process of pilot-testing has started and a few countries are being identified for pilot-testing. Process just started (few countries).	UNICEF	The process of pilot-testing has started.	
	Disaggregation See above Guidelines n.a.	Process of data collection Household surveys (MICS and DHS).						
Program participation - Family/Child allowances Program participation - School feeding	Population participating in Social Protection programs for the population and by quintiles of post-transfer welfare distribution - Family/ child allowances programmes; - School feeding programme; Definition to be completed (dependents on information available in microdata sets). - Family / child allowance: refers ideally to cash periodic benefits for families with children (either means tested or not); - School feeding programmes: refers ideally to benefit in-kind (for children).	Household survey data List of surveys available on ASPIRE [http://web.worldbank.org/WBSITE/EXTERNAL/TOPICS/EXTSOCIALPROTECTION/EXTSAFETYNETSANDTRANSFERS/0,,contentMDK:23170295~pagePK:148956~piPK:216618~theSitePK:282761,00.html#1c]	Total population.	(%) Program participation - Family/Child allowances. (%) Program participation - School feeding.	Family allowances: 24 countries depending on information available in microdatasets. School feeding: 14 countries. Years: one or several points in time between 2005-2010 (depending on survey availability in countries)	World Bank	ASPIRE (http://data.worldbank.org/data-catalog/atlas_social_protection)

	Session B Children	Total value of family / child benefits						
	Data numerator	Definition / classification	Sources: including data collection process, regularity, quality assessment (limitations, potential improvements)	Data denominator	Indicators	Data availability	Responsible organization	Links
2,3	Care for Children							
	1. Number of children in formal care in 2010, end of the year 2. Children left without parental care during the year, 2000-2010 3. Children in residential care, at the end of the year (in 1,000s) 4. Number of children in infant homes 5. Number of children with disabilities in residential care 6. Children in care of foster parents or guardians (in 1,000s), at the end of the year		Most data are collected directly from national statistical offices using a standardized template. Data for Baltic States for recent years are collected from web-sites of National Statistical offices. Additional data are also obtained from other international organizations or are calculated by UNICEF RO for CEE/CIS. Due to the different data sources for some indicators, the data presented in the TransMONEE database may diverge from those presented in other UNICEF publications and databases.	Absolute values (no denominator) or per 1000 children.	Number or rates.	Central Eastern Europe and Commonwealth of independent States (CEECIS). 1989-2010.	UNICEF	Transmonee database http://www.transmonee.org/Downloads/EN/2012/TransMonEE_2012.xls
		Disaggregation n.a.	Process of data collection n.a.					
		Guidelines n.a.						
3	Level of benefits							
	Legal benefit level	Benefit calculation formulas and absolute values for family allowances and child benefits (including statutory cash transfer programmes in some developing countries) and orphans' pensions (survivor benefits). Also covers: care supplements and allowances; periodicity of benefit payments; benefit adjustment; earnings limits for calculating benefits and contributions.	SSA/ ISSA (Collaborative effort by the United States Social Security Administration and the International Social Security Association): Social Security Programs Throughout the World; ISSA Schemes Descriptions. Based on administrative data (survey of social security institutions) for four regions: Europe, Africa, Asia-Pacific and the Americas.	No denominator.	Absolute figures.	Available for countries with some statutory provisions for family benefits (sub-group of 170+ country profiles available).	ISSA	ISSA country profiles: http://www.issa.int/Observatory/Country-Profiles Regional volume: http://www.ssa.gov/policy/docs/progdes/ssptw/
		Disaggregation Legal information	Process of data collection Each regional volume is updated every two years, with surveys carried out on a staggered basis (one region updated every six months). Response rate for 2011/12 ranged from 88%-100%.					
		Guidelines n.a.						
	Benefits and Wages: OECD Indicators levels of legal family allowances, for each OECD country	Benefits and Wages: description and indicators.	From OECD questionnaire.	No denominator.	Absolute figures.	34 OECD countries + EU countries.	OECD	http://www.oecd.org/els/soc/benefitsandwagescountriespecificinformation.htm
		Disaggregation n.a.	Process of data collection From OECD questionnaire.					
		Guidelines n.a.

4 Outcome indicators							
4.1 Other than poverty related indicators							
Child Well-Being	Low birth weight, Vaccination rates, etc.	n.a.	n.a.	n.a.	n.a.	OECD	Child Well-being Module www.oecd.org/social/family/database/CWBM
Outcomes of social protection programmes and schemes on children	Outcomes in terms of (see indicators): 1) Education; 2) Child protection; 3) Health; 4) Nutrition; 5) HIV/AIDS.	Household survey data and administrative data: UNESCO, MICS.	See indicators.	1) Education: - Proportion of children completing primary school (percentage); - Primary school enrolment parity (Ratio of girls to boys (gender parity index) in primary of the number of girls enrolled at primary levels of education to the number of boys.	Data available online (consult: http://www.childinfo.org/)	UNICEF	Data available online (consult: http://www.childinfo.org/)
		Household survey data: MICS and DHS.	i) Women aged 20-24; ii) Children under 5.	2) Child protection measured by: i) Percentage of women age 20-24 who were first married/in union by the age of 18; ii) Percentage of children under 5 whose births were registered.		UNICEF	
		Household surveys (MICS and DHS) and WHO.	Children under 5.	3) Health: - Percentage of children under 5 with measles immunization or DPT3 immunization or both.		UNICEF	

Session B Children		Total value of family / child benefits					
Data numerator	Definition / classification	Sources: including data collection process, regularity, quality assessment (limitations, potential improvements)	Data denominator	Indicators	Data availability	Responsible organization	Links
		Household surveys: DHS, MICS, World Health Organization (WHO).	i) Infants up to 6 months; ii) and iii): Children under 5.	4) Nutrition: i) Percentage of infants exclusively breastfed for 6 months; ii) Percentage of children stunted (moderate and severe - below minus two standard deviations from median height for age of reference population); iii) Percentage of children wasted (moderate and severe - below minus two standard deviations from median weight for height of reference population).		UNICEF	
		Household surveys (DHS, MICS and RHS); behavioural surveillance surveys (BSS).	15-19 years old.	5) HIV/AIDS: i) Percentage of 15-19 with comprehensive knowledge (Percentage of young women (15-24 years) who correctly identify the two major ways of preventing the sexual transmission of HIV (using condoms and limiting sex to one faithful, uninfected partner), who reject the two most common local misconceptions about HIV transmission, and who know that a healthy-looking person can have HIV); ii) Percentage of 15-19 who had sexual debut before 15 years; iii) Percentage of 15-19 with multiple sexual partners using condoms at last sex.		UNICEF	
4,2 Basic income security (poverty related indicators)							
Number of poor children	Number of the child population (age limit to be defined) living in households with per capita consumption expenditure (or per equivalent adult) below the poverty line.	National household surveys.	Total number of children.	Poverty rate among children (age limit to be defined).			
Aggregate poverty gap per capita	The aggregate poverty gap shows the cost of eliminating poverty by making perfectly targeted transfers to the poor. This indicator considers the sub-group of children (age limit to be defined) and the cost of eliminating poverty per capita within this sub-group.	National household surveys.	Total number of children.	Aggregate poverty gap per capita (Aggregate gap of poverty / child population).			

Session B Children		Total value of family / child benefits						
Data numerator	Definition / classification	Sources: including data collection process, regularity, quality assessment (limitations, potential improvements)	Data denominator	Indicators	Data availability	Responsible organization	Links	
Poor/extremely poor children (age 0-17) (by income and by multidimensional poverty)	<p>Disaggregation National, rural, urban; age groups (0-5, 6-11, 12-17).</p> <p>Guidelines http://dds.cepal.org/infancia/guia-para-estimar-la-pobreza-infantil/</p>	National household surveys.	Total number of children.	<ul style="list-style-type: none"> - Number of poor/extremely poor children (age 0-17); - Poverty/ extreme poverty headcount or children (age 0-17); - Poverty/ extreme poverty gap of children (0-17) by income and by multidimensional poverty; - Number and percentage of poor/extremely poor children (age 0-17) (poverty headcount) and poverty/extreme gap (by income and by multidimensional poverty); - Poverty: Absolute numbers. 	Data for the 2003-2008 period, covering 18 countries from Latin America.	ECLAC	http://dds.cepal.org/infancia/indicadores/	
Child relative poverty rates	Share of children living with less than 50 per cent of median equivalised household income.	OECD income surveys.	Total number of children.	Child relative poverty rates.		OECD	http://www.oecd.org/els/family/C02.2_ChildPoverty%20-%20updated%20270112.xls http://www.oecd.org/els/family/C02.1%20trends%20in%20income%20position%20-%2020270112.xls www.oecd.org/social/inequality-database.htm	

4. Session C: Mapping of data and indicators related to social protection contribution to income security of persons in active age

Session C Persons in active age								
Data numerator	Definition / classification	Sources: including data collection process, regularity, quality assessment (limitations, potential improvements)	Data denominator	Indicators	Data availability	Responsible organization	Links	
Necessary information (not necessarily to one organization)								
Qualitative information	Inventory and features of existing programmes and benefits for persons of active age, including the minimum wage.	Inventory of national schemes and programmes at the country level as original source. And when available, based on data from existing international sources, including: - Eurostat CIRCA qualitative database; - Asian Development Bank social protection index database.	Qualitative information.	Inventory and description of schemes and benefits in the ILO social security inquiry database. Qualitative information.	Available for close to 100 countries (in some cases, partial view of the social protection system).	ILO	The ILO social security inquiry: Inventory and description of schemes and benefits under "scheme information section" http://www.ilo.org/dyn/ilossi/ssima.in.home	
	Inventory of national statutory schemes (for which there is a legislative framework) providing cash sickness and maternity benefits, medical benefits, unemployment benefits and work injury benefits. Includes information on: -Regulatory Framework; -Definition of schemes and benefits: universal; social insurance; social assistance; employer liability (for work injury); -Coverage: categorical population groups covered according to legally defined scope; -Source of financing: contribution rates from insured persons, self-employed persons, employers and government; -Qualifying conditions: minimum qualifying period; other requirements (e.g., jobseeking); - Benefit formulas and in kind benefits (medical benefits); - Administrative organization.	SSA/ ISSA (Collaborative effort by the United States Social Security Administration and the International Social Security Association): Social Security Programs Throughout the World; ISSA Schemes Descriptions. Based on administrative data (survey of social security institutions) for four regions: Europe, Africa, Asia-Pacific and the Americas. Each regional volume is updated every two years, with surveys carried out on a staggered basis (one region updated every six months). Response rate for 2011/12 ranged from 88%-100%.	Qualitative information.	See definition	170+ countries.	ISSA	ISSA country profiles: http://www.issa.int/Observatory/Country-Profiles Regional volume: http://www.ssa.gov/policy/docs/pr ogdesc/ssptw/	
	The demographic structure, and in particular the share of older persons, is another factor that can have a direct impact on old-age and health expenditure, as well as on the global public expenditure indicator.	United Nations Population Division. World Population Prospects: The 2010 Revision (New York). Also available from the World Development indicators database.	Total population.	Examples of indicators may be: the share of the population aged 0-15, 15-64 or 65 and over as a percentage of total population.	Available for most countries.	UN	http://esa.un.org/wpp/	
	Labour market structure and in particular the size of the formal and informal economy has direct implications on the coverage of social insurance and other contributory schemes.	International Labour Office, based on national labour force surveys. Also available from other international or regional organisations.	Depends on indicator.	Indicators such as: - Labour force and employment to population ratio, unemployment rate; - Status in employment; - Proportion of employment in the formal / informal sector; - Informal employment as a percentage of total employment; - Proportion of employment in the agricultural sector.	n.a.	ILO	ILO Statistics department http://www.ilo.org/stat/lang--en/index.htm	

Session C Persons in active age								
Data numerator	Definition / classification	Sources: including data collection process, regularity, quality assessment (limitations, potential improvements)	Data denominator	Indicators	Data availability	Responsible organization	Links	
	Legal minimum wage and information on minimum wage as part of the Database of Conditions of Work and Employment Laws.	1. ILO Travail Legal Database; 2. 1 Social protection expenditure								
Public social protection expenditure other than pensions and other social assistance for elderly; or child protection	Expenditure available for the following benefits for persons in active age: - Unemployment insurance benefits; - Other social insurance (maternity, disability); - Other social assistance; - Labour market programmes; - Benefits in cash (periodic and lump) or in-kind; - Means tested or not; - Public schemes; - Contributory or not contributory schemes. Disaggregation - Social insurance/social assistance Guidelines The Revised Social Protection Index: Methodology and Handbook, ADB 2012 http://www.adb.org/sites/default/files/spi-handbook.pdf	Administrative data from social security institutions providing pension benefits and provident funds. Process of data collection Rounds of data collection through specific projects (and financing) National correspondent (one per country), Data from each programme (administrative data) or ministries responsible.	GDP, As part of social protection index.	Public social protection expenditure other than pensions and other social assistance for the elderly or child protection.	2004-2005/ 2008-2010 Asian countries.	ADB	Not yet available online.	
Benefit expenditure on: - Unemployment benefits - Cash benefits in case of sickness (periodic or lump sum) - Income maintenance in the event of childbirth - Disability benefits - Unemployment - Housing - Social exclusion	Includes all types of benefits targeting persons in active age (public and private expenditure; all schemes and benefits) by function: - Unemployment benefits; - Cash benefits in case of sickness (periodic or lump sum); - Income maintenance in the event of childbirth; - Disability benefits; - Unemployment; - Housing; - Social exclusion. Disaggregation - Benefit in kind / benefit in cash; - Periodic; lump sum; in-kind; - Means-tested; non means-tested. Guidelines ESSPROS manual [ESSPROS Manual - The European System of Integrated Social Protection Statistics (2012 edition) // http://www.socialsecurityextension.org/gimi/ge/ss/RessFileDownload.do?ressourceId=31988]	Administrative data from social protection programmes providing benefits to child and families. Process of data collection: Well established: regular contact with a national correspondent in each EU country (member of the ESSPROS working group).	Absolute figures, GDP.	Expenditure on family/ child benefits: - In MIO of national currency; - In million EUR; - In MIO of PPS; - In PPS per head; - As a percentage of GDP.	1990-2010 European countries.	Eurostat	http://appsso.eurostat.ec.europa.eu/nui/setupModifyTableLayout.do	

Session C Persons in active age								
Data numerator	Definition / classification	Sources: including data collection process, regularity, quality assessment (limitations, potential improvements)	Data denominator	Indicators	Data availability	Responsible organization	Links	
Public social protection expenditure on programmes for persons in active age Total and by function: - Unemployment - Maternity benefits - Employment injury - Sickness benefits - Disability benefits - Active labour market programmes - Housing - Other social assistance programmes not classified elsewhere	The annual public social security expenditure on benefits provided to persons in active age is the sum of expenditures (including benefit expenditure and preferably administration costs) of all existing public social security/social protection providing benefits for the following social security functions: - Unemployment; - Maternity benefits; - Employment injury; - Sickness benefits; - Disability benefits; - Active labour market programmes; - Housing; - Other social assistance programmes not classified elsewhere. Includes all types of benefits: - From contributory and non-contributory schemes; - In cash (periodic or lump-sum) or in kind benefits; - Means tested and non means-tested benefits; - Focus on public schemes.	Administrative data from social protection programmes providing benefits to persons in active age.	GDP, Total government expenditure, Public social protection expenditure.	- Public benefits expenditure for persons in active age as a percentage of GDP; - Public benefit expenditure for persons in active age as a percentage of total public social protection expenditure.	Data available for more than 120 countries. No time series yet but available for latest available year. Will be published in the next WSSR and made available in excel format online.	ILO	Will be published in the next WSSR and made available in excel format online. Available for some countries from the ILO social security inquiry.	
	Disaggregation - Contributory/non-contributory; cash periodic benefits; cash lump sum and benefits in kind; means tested and non means tested benefits. Guidelines ILO SSI manual and methodology compatible for Eurostat ESSPROS and OECD SOCX.	Process of data collection [Not yet sustainable] - Online from social security institution websites (annual and statistical office reports), national statistical office (annual yearbook); - National consultant coordinating data collection from the identified social security institutions and programmes; - Joint ADB/ ILO/ OECD project for Asian countries; - Eurostat ESSPROS; - OECD SOCX database.

Session C Persons in active age							
Data numerator	Definition / classification	Sources: including data collection process, regularity, quality assessment (limitations, potential improvements)	Data denominator	Indicators	Data availability	Responsible organization	Links
2 Coverage indicators							
2.1 Scope of legal coverage							
Statutory provision in case of - Employment injury - Unemployment - Maternity - Disability - Sickness	Existence of statutory provision: according to national law, at least some groups of persons in active age are legally covered for: - Cash periodic sickness benefits; - Cash periodic unemployment benefits; - Disability benefits; - Cash periodic maternity benefits; - Employment injury benefits and type of programmes (social insurance and/or social assistance; mandatory private insurance; only employer liability provision; severance payment [apply to unemployment]). Disaggregation - Distinction between contributory and non-contributory schemes; - Voluntary and mandatory basis N.B. - Groups covered for lump sum payment (for unemployment) or to benefit in kind only (in case of maternity or sickness) are identified and considered as a separate group. Guidelines n.a.	National legislation as available in SSA/ISSA Social security programs throughout the world.	Qualitative information.	Existence of statutory provision and type of programme.	Available for most countries. Latest available year (2010/2011).	ILO	
2.2 Extent of legal coverage							
Population legally covered for the following social security functions - Unemployment - Employment injury - Maternity cash periodic benefits	Persons in active age covered by law for respectively: - Employment injury benefits; - Unemployment (cash periodic benefits; severance payment considered separately); - Maternity cash periodic benefits. Disaggregation - Distinction between contributory and non-contributory pension; - Gender; - Voluntary and mandatory basis; N.B. - Groups covered for lump sum payment are identified and considered as a separate group. Guidelines n.a.	National legislation for identification of the groups legally covered. National statistical offices for quantifications of the groups (national surveys - LFS in particular); census and international depository (KILM, Laboursta). Process of data collection - SSPTW for legal information; - ILO LABOURSTA, ILO KILM and national statistical offices for quantification of groups legally covered. 2 points in time available at present. Not yet sustainable.	- Active age population (15-64) age range to be discussed; - Economically active population; - Total employment. International: ILO/KILM or national statistical offices (surveys or census).	Percentage of the working age; EAP; total employed population legally covered (total and by gender) with the distinction between contributory and non-contributory pensions / mandatory and voluntary basis in case of: - Employment injury; - Unemployment cash periodic benefits; - Maternity cash periodic benefits	Available for most countries. Latest available year (2010/2011).	ILO	

Session C Persons in active age

2.3 Extent of effective coverage							
Beneficiaries of: - Unemployment insurance benefits - Other social insurance (maternity, disability) - Other social assistance - Labour market programmes	Beneficiaries for the following benefits among persons in active age: - Unemployment insurance benefits; - Other social insurance (maternity, disability); - Other social assistance; - Labour market programmes; - Benefits in cash (periodic and lump) or in-kind; - Means tested or not; - Public schemes; - Contributory or not contributory schemes.	Administrative data from social security institutions providing benefits to persons in active age; No treatment of double counting.	- Unemployment and LMP: unemployed (and estimates of under-employed); - Insurance benefits: Employed + population 60+.	Not presented as disaggregated indicators.	2004-2005/ 2008-2010 Asian countries.	ADB	-
	Disaggregation Social insurance / social assistance/Labour market programmes.	Process of data collection Rounds of data collection through specific projects (and financing); National correspondent (one per country); Data from each programme (administrative data) or responsible ministries.					
	Guidelines The Revised Social Protection Index: Methodology and Handbook, ADB 2012 http://www.adb.org/sites/default/files/spi-handbook.pdf						
Beneficiaries of labour market policy supports, by type of action Annual average stock	Beneficiaries of labour market policy supports, by type of action - annual average stock. Labour market policy (LMP) supports refer to interventions that provide financial assistance, directly or indirectly, to individuals for labour market reasons or which compensate individuals for disadvantage caused by labour market circumstance. LMP supports are classified by type of action and cover the following categories: - Out-of-work income maintenance and support (mostly unemployment benefits); - Early retirement. Beneficiaries of LMP supports are presented here as annual average stock, i.e. the data refer to the average number of persons benefitting from the LMP supports at any point during the year.	Administrative data.	Absolute figures rather than indicators.	Absolute figures rather than indicators.	2000-2011 European countries. Session C Persons in active age								
Data numerator	Definition / classification	Sources: including data collection process, regularity, quality assessment (limitations, potential improvements)	Data denominator	Indicators	Data availability	Responsible organization	Links	
Number of beneficiaries of - Disability benefits - Maternity benefits - Sickness benefits - Employment injury benefits - Other social assistance benefits - Labour market programmes	Data collected through the ILO social security inquiry. According to the usual 'definition' of schemes and benefits, this includes: - Benefits providing by contributory and non-contributory schemes (mainly public but possibly private); - Benefits can be in cash or in kind; - Means tested or not.	Administrative data from social protection schemes often give the most up-to date and comprehensive information for this indicator. However, the availability and quality of such data vary across countries, and across schemes within countries. Household survey data overcomes some of the limitations of administrative data (providing that the necessary information is available in the survey).	Reference population as appropriate.	Percentage of the appropriate population of reference depending on indicators (example: percentage of unemployed receiving unemployment benefits). Some of the indicators are still to be developed.	Depends on indicator	ILO	ILO Social security inquiry (http://www.ilo.org/dyn/ilossi/ssimain.home) and consolidated from various sources in excel files	
	Disaggregation By gender. Guidelines ILO SSI manual and methodology compatible for Eurostat ESSPROS and OECD SOCX.	Process of data collection [in-between institutionalised sustainable process and ad-hoc] - Online from social security institution websites (annual and statistical reports), national statistical office (annual yearbook); - National consultant coordinating data collection from the identified social security institutions and programmes.						
Number of recipients for the following programmes (respectively) - Unemployment - Disability - Social assistance and lone parents - Housing (different reference population)	The number of participants is defined as the number of individual programme recipients on average over of the year or at the end of quarter. Individual recipients are only the beneficiaries whose social risk (e.g. unemployment or disability) generates the entitlement to benefit. For benefits that can be adjusted to the size of the family, such as social assistance or housing benefits, only direct recipients are counted in administrative records (even if the claimant has several dependents). Disability pension: periodic income replacement benefits paid to individuals with reduced capacity either through insurance-based or assistance-based programmes. Sickness benefits as well as occupational disease or work-accident programmes are not accounted for here. Unemployment benefits comprise either unemployment insurance or unemployment assistance programmes. Recipients might be counted as unemployed according to the ILO-OECD definition, but this is not necessarily the case. Partial unemployment and activation programmes are not included. Social assistance and lone parents: non-categorical" social assistance programmes (programmes not targeted on specific groups, typically regrouped under the "Other social" branch of social protection) and lone-parent benefits (often categorized as "Family" benefits)	Administrative data.	-Participation rate: Working age (15-64) population (except for housing); - Pseudo participation rate: persons of interest for given benefit (e.g. unemployed for unemployment benefit).	Based on this numerator data, several indicators are calculated for each type of programme: - The participation rate is the total number of recipients in a given programme relative to the population of the country, or to a specific age-group; For unemployment, disability, social assistance: the population of reference maybe the working age (15-64) population. For housing, the total population; - The pseudo-coverage rate is the total number of recipients in a given programme (e.g. unemployment beneficiaries) relative to the number of people in some group of interest. Usually this group is the one a priori targeted by the programme: the unemployed (according to the ILO-OECD definition) for unemployment benefits, the disabled for disability benefits.	OECD countries 2007-2010	OECD	http://www.oecd.org/els/soc/recipients.htm	

Session C Persons in active age							
Data numerator	Definition / classification	Sources: including data collection process, regularity, quality assessment (limitations, potential improvements)	Data denominator	Indicators	Data availability	Responsible organization	Links
	Housing benefits comprise the main cash benefits, paid on a regular and periodic basis. Lump-sum benefits, like state aids to buy a house, as well as reduced-interest-rate mortgages, tax credits on mortgage interest or direct provision of state-subsidized housing are not included.						
	<p>Disaggregation See above.</p> <p>Guidelines Guidelines, definition associated to the 'OECD new database on social benefits recipients'</p>	<p>Process of data collection n.a.</p>

2 Coverage indicators								
2,1 Extent of legal coverage								
Population legally covered for old age pension	Estimate of the number of persons covered by law for an old age pension (cash periodic benefit). Includes: - Legal/statutory coverage by contributory and non-contributory schemes; - Mandatory as well as voluntary coverage (identified and mainly for self-employed); - Means tested as well as non-means tested non-contributory old age pensions. Disaggregation - Distinction between contributory and non-contributory pension. - Gender; - Voluntary and mandatory basis N.B. - Groups covered for lump sum payment are identified and considered as a separate group Guidelines Methodology in the World social security report (first chapter).	National legislation for identification of the groups legally covered. National statistical offices for quantifications of the groups (national surveys - LFS in particular); census and international depository (KILM, Laboursta). Process of data collection - Use existing legal information from international available sources (SSA/ISSA and Natlex), complemented when necessary by national legislation; - Quantify groups legally covered using mainly ILO/KILM data or ILO Laboursta when possible; - National statistical offices (statistical reports) and microdata when groups are specific and more difficult to quantify; - Update every 2-3 years for most countries worldwide [Centralised process].	- Active age population (15-64) age range to be discussed; - Economically active population. International: ILO/KILM or national statistical offices (surveys or census).	Percentage of the working age population legally covered for old age (total and by sex) with the distinction between contributory and non-contributory pensions/mandatory and voluntary basis.	Available for most countries Latest available year (2010/2011)	ILO	http://www.social-protection.org/gimi/gess/ResFileDownload.do?ressourceId=29545

Active contributors to an old age pension scheme	<p>Active contributors are insured individuals who have made at least one contribution or on whose behalf at least one contribution has been made during the reporting period (i.e. the 12 month period). The scope of the numerator for this indicator is contributory or partially contributory pension schemes. The indicator focuses on active contributors who are a sub-group of the affiliated or protected population. Active contributors are insured individuals who have made at least one contribution or on whose behalf at least one contribution has been made during the reporting period (i.e. the 12 month period).</p> <p>Disaggregation: - By gender; - Age.</p> <p>Guidelines ILO social security inquiry manual and guidance online.</p>	<p>Administrative data from old-age pension schemes often give the most up-to date and comprehensive information for this indicator. However, the availability and quality of such data vary across countries, and across schemes within countries.</p> <p>Process of data collection [in-between institutionalised sustainable process and ad-hoc] - Online from social security institution websites (annual and statistical reports), national statistical office (annual yearbook); - National consultant coordinating data collection from the identified social security institutions and programmes - Centralised process of data collection. Regular/ on-going updates.</p>	<p>The reference population is the economically active population (15-64). Alternative indicator: active age population.</p>	<p>Share of economically active population contributing to a pension scheme. Alternative indicator: Share of active age (15-64) population contributing to a pension scheme.</p> <p>Interpretation guidelines [as well as general guidelines concerning sources, formula, etc.] available in Decent Work Indicators - Concepts and definitions, ILO Geneva, June 2012 // http://www.ilo.org/stat/Publications/WCMS_183859/lang--en/index.htm</p>	<p>Available for most countries Latest available year (2010/2011) * Selected as part of ILO decent work indicators</p>	ILO	
Number of old-age pension beneficiaries above statutory retirement age	<p>An old – age pension refers to periodic payments intended: (i) to maintain the income of the beneficiary after retirement from gainful employment at the legal/standard age or (ii) to support the income of elderly persons (excluding support for a limited duration). Cash periodic retirement benefits can be means-tested or non means-tested and provided through contributory or non-contributory schemes. Beneficiaries who receive supplementary benefits in complement to another basic old-age benefit (i.e. “second-pillar” schemes) are excluded to avoid double counting. The age limit can be set at the statutory retirement age or, in cases where international comparison is desired, at 65 or above. To the extent possible, the numerator includes survivors’ and disability benefits once the beneficiary reaches the statutory retirement age (or the age of 65).</p>	<p>The administrative data on old-age pension schemes In the absence of reliable administrative records, data from household surveys (household budget surveys and labour force surveys) could be used, provided that persons with old-age pensions can be identified.</p>	<p>The denominator corresponds to the total size of the population defined as above the statutory retirement age or aged 65 or above. The same age group has to be used for the numerator.</p>	<p>Share of population above the statutory pensionable age benefiting from an old-age pension.</p>	<p>Data available for more than 160 countries (organised by region) Years: variable availability from 2000-2011.</p>	ILO

Theoretical replacement rates	To assess long term pension adequacy - <i>Replacement rates</i> are case study based calculations that show the level of pension income the first year after retirement as a percentage of individual earnings at the moment of take-up of pensions. - <i>Theoretical replacement rates</i> are calculated for an assumed hypothetical worker, with a given earnings and career profile and a corresponding affiliation to pension schemes. Replacement rates also rely on specific assumptions on the key economic and demographic parameters that are relevant for the calculation of future earnings and benefit entitlements. The calculations are made according to a set of hypothetical cases and assumptions based on currently legislated reforms. Available disaggregation: n.a. Guidelines: n.a.	Model. Aggregate poverty gap per capita	The aggregate poverty gap shows the cost of eliminating poverty by making perfectly targeted transfers to the poor. This indicator considers the sub-group of persons aged 65 and over and the cost of eliminating poverty per capita within this sub-group.	National household surveys.	Population aged 65 and over.	Aggregate poverty gap per capita (Aggregate gap of poverty / population aged 65+).	n.a.	n.a.	

6. Session E: Identification of challenges – issues, gaps and overlaps

Based on the mapping of existing international social protection data and indicators, it was possible to identify issues, gaps and overlaps. They are presented in the order of the discussion, which is not necessarily the right order of priority.

Eight main issues were identified⁵:

1. Defining and categorizing social protection data in order to enhance comparability among international organizations

As of today, there are some established criteria for classification (for example: statutory/non-statutory, in cash/in kind, etc.) shared by some organizations (Eurostat, OECD and the ILO for instance), but not by all organizations collecting and publishing data on social protection. Differences in classifications (sometimes motivated by the feeling, among some organizations, those existing classification criteria do not respond to their specific objectives or that some “grey areas” remain) and in definitions do not allow for an optimal use of the collected data in terms of comparability and compatibility between databases. A direct consequence is that organizations are often not able to use other organizations’ data (notably they are not able to establish the necessary bridges from one classification to the other). Another major consequence is the fact that the scope of indicators used by each organization is not clearly identifiable across organizations and users.

2. Determining a core set of data on social protection

Closely linked with the first issue, the definition of core data to be collected at a minimum should ensure comparability and allow for the use of data by various organizations as well as the creation of bridges between different classifications. Some common broad categories of data have been highlighted in the “preliminary mapping” of existing social protection data: expenditure, financing (see issue 8 below), (extent of) coverage (beneficiaries, active contributors, and affiliated people), level of benefit and impact (see Box 3). The scope and the level of disaggregation of data collected vary widely from one organisation to the other. Thus, the lack of comparability and compatibility mentioned above results in a large number of data sets, sometimes incomplete in terms of periodicity of collection, geographical coverage, etc. The definition of a set of core data should be done in a way that also allows each organization to calculate its respective indicators according to its mandate and needs. It will be the first step towards coordination and harmonization between organizations on social protection statistics. Additionally, it will facilitate closer collaboration at the country level, and contribute to a “division of labour” among agencies depending on their respective areas of strength. It would also delimit the scope for a possible standard in the area of social protection statistics to be applied by organisations and in countries. Some principles will be defined progressively as the minimum core set of social protection data extends.

⁵ Most of those issues overlap with the “underlying issues” detailed in Box 3.

3. Data collection on social protection through household surveys

Household survey data is the only source of data enabling the assessment of the absence of coverage and analysis of the social protection needs of those who are not currently covered. Likewise, it is the only source of data to enable estimates of the impact of existing (or simulated) social protection benefits on household poverty or inequality reduction. Still, as of today, there are many household surveys that include too few or no questions on social protection. As a pre-requisite, it is of critical importance to have adapted standard questions concerning main existing programmes and benefits as part of any questionnaire. Several initiatives from international or regional organisations have developed generic questions on social protection to be included in regular national household surveys or as part of independent surveys. In parallel some countries have also included (on a more or less regular basis) questions on social protection in their national household surveys, sometimes unfortunately without disseminating or analysing results. But there is no standardized method, shared generic set of questions or definition of reference populations (to be surveyed). In addition to the limited availability of social protection data through surveys, current practices reduce their comparability⁶.

4. Coverage measurement

There is an agreement that coverage should be measured using as sources both administrative records and household surveys. Unlike expenditure data which can be added and still refer to meaningful aggregate results, coverage indicators can easily lose relevance in the absence of a clear definition of what benefits (policy area, periodic or not, cash or in kind, etc.) are included or not. Coverage refers to persons protected for a given risk/contingency or persons benefiting from specific social protection benefits. Not all social protection benefits contribute to the same extent to income security. The objective of any coverage indicator should be precisely defined. This objective will determine the scope (what schemes, what types of benefit to be included) and level of disaggregation required regarding data to be collected. As far as coverage is concerned, agreed categorisation and qualification of schemes and benefits is crucial⁷. Still, there are no standardized methods of data collection on coverage, nor a set of basic principles on how to measure coverage. This results in a variety of incomparable coverage rates calculations across organizations.

5. Collecting and sharing qualitative and contextual information

Qualitative information includes, as an important starting point, an inventory of programmes and benefits existing at the country level. Once again this relies on various practices in terms of definition, qualification and categorisation of programmes and benefits. This inventory should provide the structure for data collection (in nature and level of details). Additional qualitative information (referring to the programme design, legal framework, qualifying conditions, governance and administrative structure, etc.) is not only necessary for the definition of indicators but also for identifying areas of improvement. Some systematic and mutually supportive qualitative data collection is developed and implemented by some organizations (in particular Eurostat, ILO, OECD and ISSA). However, methods are still to be improved and data shared by others. There is currently, between the various international organizations, no agreed minimum set of

⁶ For further details and discussions on this topic, see the International Conference on Labour Statisticians and the Canberra Group, respectively available online at: <http://www.ilo.org/global/statistics-and-databases/meetings-and-events/international-conference-of-labour-statisticians/lang--en/index.htm> and <http://unstats.un.org/unsd/methods/citygroup/canberra.htm>.

⁷ For more details, see Appendix 2.

qualitative and contextual information (including wider issues such as demographic and labour market structure which help in the interpretation of results and indicators) to be collected and published along with the quantitative information.

Some of these first five issues are summarized in the box 3 below, which seeks to link objectives to be met and questions to be answered in the field of social protection and the obstacles to be overcome in doing so.

Box 3	
Social protection data and indicators: from the formulation of objectives to the highlighting of key underlying issues	
Objectives	Some of the underlying Issues
<p>1 Overview of national social protection systems: Mapping national social protection systems: definition of schemes/ programmes and/or benefits and quantification of key social protection dimensions.</p> <p>Data collected? Data on expenditure, financing, coverage, levels of benefits?</p> <p>Expenditure and financing of social protection systems</p> <ul style="list-style-type: none"> ■ How much is spent (how much for the benefits, how much for the administration)? ■ Who is paying (financing sources)? <p>Source: mainly administrative data.</p> <p>Coverage (persons protected and beneficiaries) How many beneficiaries are reached by current social protection provision? Sources: Survey data to overcome some of the limitations of administrative data.</p> <p>2 Picture of uncovered populations in need for social protection:</p> <ul style="list-style-type: none"> ■ Who are those not currently covered but in need of coverage? ■ What are their needs? ■ What are the risks they are exposed to? ■ What is their employment situation? ■ In what extent can they contribute? ■ What are the options for the extension of coverage? <p>Sources: Household survey data as the only possible source to assess the absence of coverage & needs of those who are not covered.</p> <p>3 Measure of the general impact of social protection</p> <ul style="list-style-type: none"> ■ What are the (potential/actual) impacts of these benefits? ■ What are the effects of social transfers on living standards? <ul style="list-style-type: none"> ■ Effectiveness: Does the programme reach its objectives? ■ Efficiency: Does it achieve its objectives in an optimal way? 	<ul style="list-style-type: none"> ■ How to define/categorize schemes and benefits? ■ Current practices? ■ Possible bridges between existing classifications? ■ Towards standardization? ■ Qualitative & quantitative info: inventory of main schemes & benefits to structure and understand quantitative data? What else? ■ What could be a minimum set of data to map existing social protection and monitor extension? <ul style="list-style-type: none"> ■ Standardized classification of expenditure?of financing sources? (ESSPROS, International Monetary Fund (IMF)?) National accounts? <ul style="list-style-type: none"> ■ Sources: 'recommended' or relevant source(s) depending on data category and respective advantage & limitations of administrative data, surveys? ■ How to measure coverage? ■ How to interpret general measures of coverage? ■ Various practices: coverage by function, legal versus effective, protected persons and actual beneficiaries; or some overall assessment of coverage. ■ Reference population? ■ Type of benefit included/ excluded <ul style="list-style-type: none"> ■ How to improve availability of survey data?(see below). <ul style="list-style-type: none"> ■ How to improve availability of survey data? ■ Importance of having appropriate questions on main existing programmes and benefits as part as the questionnaire. ■ Inclusion of questions on persons covered as well as beneficiaries. ■ Assessment/limitations of existing surveys to be kept in mind while interpreting results. ■ Ways to improve social protection 'presence' in national surveys (module of SP questions). ■ Standardization of social protection data collection through household surveys. <ul style="list-style-type: none"> ■ What type of indicators of impacts/ effects of social protection benefits can be selected/promoted when considering the objective of basic income security? <ul style="list-style-type: none"> ■ What about outcome indicators?

6. Subsidies and tax benefits

There are arguments in favour of the inclusion of subsidies of many kinds as well as tax benefits in social protection data and indicators. There is still no agreement on how to determine their level of inclusion and the method to integrate them.

7. Poverty lines

Several poverty lines exist (internationally defined poverty and extreme poverty lines, nationally defined poverty and extreme poverty lines) and there is no agreed method among agencies to determine which one to use when building social protection indicators or evaluating the social protection needs of specific population groups.

8. Sources of financing

This issue relates and should contribute to issue 2 (on determining a core set of social protection data). It is necessary to identify existing financing sources (taxes, contributions, etc.) and at standardize, when possible, their treatment in order to allow measurement that suits the needs of various actors (governments, donors, international organisations, etc.). Among the initial concerns are: the treatment and disaggregation of taxes, the treatment of loans and grants as well as the broader issue of assessing the financing of non-contributory programmes. Information, data and indicators should draw on legal information as well as provide relevant and useful quantitative elements on the effective financing patterns.

Gaps

Drawing on a first gap analysis, several gaps in existing data were identified, in particular concerning: benefit levels, programmes targeting persons in active age (and especially regarding public employment programmes and disability benefits), housing benefits and the absence of a shared micro-data repository. Defining the desired data and establishing a proper methodology for data collection are often underlying issues related to the lack of collected data. The issue of possible new gaps arising from new protection mechanisms in the future may also be anticipated.

Overlaps

Some overlaps were identified as well, in particular regarding unemployment and pension data. Drawing on the substantive work of Eurostat, ILO and OECD in developing a common methodology which made possible the current repartition of data collection among the concerned organizations, other partnerships could be envisaged. The ILO and the World Bank are starting a process of collaboration on this specific topic regarding pension data.

For each of those identified issues, gaps and overlaps, participants brainstormed and identified possible corrective actions and spaces for collaborative approaches. Priorities for some of these issues and gaps have been highlighted and the responses to the various issues will be phased accordingly. A detailed road map was subsequently developed (See Appendix 2).

7. Conclusion

The workshop allowed for effective brainstorming on possible solutions and potential areas of collaboration between agencies to address the issues, gaps and overlaps identified in the mapping exercise. This exercise led to an agreement on a proposed first road map for the work ahead, highlighting that this workshop represents the beginning of a long-term collaboration.

The draft road map is available in Appendix 2 of this document. It details the possible activities in the short, medium and long term⁸.

Some major action points can be highlighted as follows:

- Finalization and dissemination of the mapping completed during the workshop.
- Creation of a permanent social protection statistics and indicators inter-agency working group, including various sub-groups in order to address the specific issues listed above.
- Creation of a web-based work-space for the group in order to allow for information and resource sharing.
- Organization of annual workshops. The next one will address the issue of household surveys and should be held before the end of 2013.
- Elaboration of a series of guidelines on social protection statistics endorsed by all organizations. These guidelines could take the form of a modular publication which would allow a flexible approach. The various agreed guidelines produced by the working group would be added to progressively and address the issues and gaps identified through the road map. These include: definition and categorization of social protection data to enhance comparability among international organizations, identification of a core set of social protection data, coverage measurement, benefit level data collection, classification and measurement, main sources of data on social protection (advantages and limitations, processes depended on sources) and specific case of social protection data collected through household surveys (including formulation of key generic questions to be included in regular household surveys), among others.
- Agreement of a set of core social protection data allowing the mapping of social protection systems and the monitoring of their extension (definition and categorisation) in the medium term, to be included in the Common Guidelines.
- Planning of joint capacity building activities at the country level in the medium term.

⁸ Organisations have subsequently expressed some interest for joint activities, including within sub-groups. This will serve as a basis to draw the terms of references of the Social Protection statistics and indicators inter-agency working group.

Resources

All participating organizations and some other organizations make available to the public a number of resources on social protection statistics. The mapping exercise as well as the workshop discussions allowed for the sharing of those resources and it was agreed to include them in the working group's workspace.

The various resources available by organization as well as documentation from the 13th-15th March 2013 workshop, including the mapping exercise, can be found at the following address:

<http://www.socialsecurityextension.org/gimi/gess/ShowProjectPage.do?pid=1975>.

Social Protection statistics and indicators inter-agency working group

Quick access to: [Main resources](#) | [Mapping](#) | [Roadmap](#) | [All resources](#)

Background: Towards a social protection statistics and indicators inter-agency working group

There is a resurgence of interest for social protection at the global level. In parallel, many countries, both developed and developing, experienced a significant growth in the provision of social protection benefits over recent decades. The recent adoption of the ILO Social Protection Floors Recommendation, 2012 (No. 202) will actively contribute to this process of extension of social protection and calls explicitly for the monitoring of social protection systems both at national and international levels. This last provision brings an important challenge since there is not as of today any consistent and systematic methods regarding the gathering of data and information on provision, coverage, cost or impact, while those would be much needed. Indeed, at national level, many countries face real difficulties in assessing current social protection provision gaps and needs. At the global level, there is a lack of consistent and readily comparable analysis of provision across countries. Furthermore, the efforts made by the international community to gather such data were not always consistent, and in some cases, resulted in duplication of efforts and inefficiencies.

In 2011, the G20 called for greater coordination between agencies on social protection, and SP/AC-B was subsequently created. At the 2nd and 3rd meetings of the SP/AC-B, it was agreed to put some cooperation efforts towards social protection data and statistics. Subsequently, an initiative for the harmonization of international social protection data was put forward in order to promote data quality, increase institutional efficiency, avoid unnecessary duplication, and develop a consistent statistical picture of social protection provisions both at present and over time globally (across all countries regardless of their development status).

Urged by this need to develop an integrated and a collaborative approach allowing for the monitoring of the extension of social protection that the ILO Social Protection Department convened a workshop on "Mapping existing international social protection statistics and indicators that would contribute to the monitoring of social protection extension through Social Protection Floors". Between 13th and 15th March 2013, it was decided that a more permanent social protection statistics and indicators inter-agency working group should be established and composed of key development partners working on the collection, analysis and dissemination of social protection data for the purpose of international comparisons.

The Workspace

This workspace is a tool for the social protection statistics and indicators inter-agency working group. It will facilitate discussion and the sharing of information and resources across the relevant international organisations.

Through the workspace, the working group will continue to work towards mapping the various ways social protection coverage is currently measured across organisations and the different indicators used and developing greater coherence between organisations in the way that social protection coverage is defined and measured.

Appendices

- I. The ILO tree for classification, categorisation of social protection data
- II. First version of the road map of the social protection statistics and indicators inter-agency working group

Appendix I: The ILO tree for classification of social protection data

Main definitions

Classification/categorization of schemes

Statutory non statutory schemes or programmes

Refers to enforcement

Legal enforcement refers to the rules laid down by legislation concerning the membership of the protected people. Membership of a social protection scheme may be i) compulsory or ii) non-compulsory.

In the framework of the ESSPROS (applied in the ILO social security inquiry) the concepts compulsory and voluntary are interpreted from the point of view of the people protected.

Statutory based schemes includes:

- i) Compulsory schemes are social protection schemes where membership is made compulsory by the government. Compulsory schemes may include both schemes established by law or regulation and those established by convention or collective agreement between employers and employees or members of the same profession and subsequently made obligatory by the government.
- ii) Some of non-compulsory schemes, established by law or regulation and available for voluntary membership to specific groups such as low-income self-employed workers, or people who choose to remain protected after a period of compulsory cover comes to an end), even though membership is not made compulsory by government.

Non statutory based schemes consist of other non-compulsory schemes non legally based (some as some micro-insurance based schemes).

Source: [ESSPROS Manual - The European System of integrated Social Protection Statistics \(2012 edition\)](#)

Public/private schemes (to be further discussed for an agreement among organizations)

Refers to decision making which refers to the unit that takes the most important decisions: the level of benefits, the terms on which they are paid and the ways in which the scheme is financed. Schemes may be government-controlled or not government-controlled.

As public schemes

Government-controlled schemes. *Controlled* implies that the government takes all the principal decisions about the level of benefits, the terms on which they are paid and the ways in which the scheme is financed. It is not sufficient to classify a scheme as government-controlled simply because the government has a formal (but unexercised) right to determine the policy of a given scheme or the scheme's managers have an obligation to submit certain decisions for broad approval to the public authorities.

Government-controlled social protection is usually established by law or regulation. It includes all schemes that provide protection to public servants on the same lines as that provided to the general population by government-controlled schemes, but *excludes* schemes that government may set up in its role of employer and which have no government-controlled counterparts in the private sector. These schemes are classified as not government-controlled schemes for employees.

Examples of government-controlled schemes are:

- non-contributory schemes set up by government to meet its general social responsibility, such as an income support scheme for destitute people or a rent benefit scheme;
- schemes run by social security funds;
- schemes originally established in the private sector and for which the government has later assumed responsibility.

Government-controlled social protection may be further subdivided by level of government into:

- Central government schemes and social security funds
- State and local government schemes

As private schemes

Not government-controlled schemes are all social protection schemes which are not controlled by government in its role of public authority.

The following types of schemes are usually not government-controlled:

- schemes run by non-profit institutions (mutual benefit societies, friendly societies, institutions co-administered by the social partners and so on);
- schemes administered by commercial insurance companies;
- non-autonomous schemes run by employers maintaining separate reserves in their balance sheets to cover their liability to pay benefits in the future (book reserves). Included here are funded schemes which government may have set up in its role of employer;
- non-autonomous schemes run by employers without maintaining segregated funds, including unfunded schemes which government may have set up in its role of employer.

The ESSPROS sub-classifies not government-controlled schemes into i) not government-controlled schemes for employees and ii) other not government-controlled schemes.

- i) *Not government-controlled schemes for employees are social protection schemes organized (but not necessarily run) by employers for their employees, former employees and their dependents. Two groups are distinguished:*
- Contractual not government-controlled schemes for employees provide social protection decided via bargaining between the social partners (employers and employees). The terms of such schemes are fixed by collective agreement and cannot be unilaterally changed by employers;
 - Non-contractual not government-controlled schemes for employees provide social protection to employees at the discretion of the employer.
- ii) *Other not Government-controlled are all not government-controlled schemes other than those organized by employers for their employees, former employees and their dependents. They may be organized, for instance, for the general public or specific groups such as the self-employed.*

Sources: [ESSPROS Manual - The European System of integrated Social Protection Statistics \(2012 edition and ILO Social Security Inquiry 2005 Manual\)](#). To be completed and amended with other organizations definitions.

Contributory/non contributory

Refers to entitlement to benefits. Establishment of entitlements refers to the basis on which the protected person is eligible for benefits: conditional or not conditional on *payment of contributions*.

Contributory schemes are social protection schemes that require the payment of contributions, by the protected persons or by other parties on their behalf, in order to secure individual entitlement to benefits. In contributory schemes, entitlement to a benefit is based on contributions from insured persons and/or their employer.

By convention, all non-autonomous schemes that employers run in favour of their employees, former employees and their dependents are classified as contributory schemes.

Social insurance schemes are a sub-category of contributory schemes. It should be noted that social insurance is distinguished in strict technical terms in that the risk-pooling is based on the principle of solidarity, as against insurance arrangements of a more familiar, commercial type, based on individually calculated risk premiums.

Partially contributory schemes refer to social security schemes of mixed character, that is, they are characterized as both contributory and non-contributory types. Many social security schemes described as being of a contributory type are in actual fact of mixed character, with some non-contributory elements in entitlements to benefits; this allows for a more equitable distribution of benefits, particularly for those with low incomes and short or broken work careers, among others. These non-contributory elements take various forms, being financed either by other contributors (redistribution within the scheme) or by the State

Non-contributory schemes are social protection schemes in which eligibility to benefits is not conditional on the payment of contributions by the protected persons or by other parties on their behalf but on other criteria. Non-contributory benefits are usually financed out of general taxation. Many non-contributory schemes give benefits only after a means-test. Non-contributory schemes which do not require a means-test may be categorical (such as some pension benefits) or universal (such as national health services and family allowance schemes).

Sources: [ESSPROS Manual - The European System of integrated Social Protection Statistics \(2012 edition, World social security report, ILO 2010, p.15\)](#)

Compulsory/mandatory schemes versus voluntary ones

ESSPROS, OECD SOCX and the ILO social security inquiry make the distinction between compulsory/mandatory and voluntary schemes. These concepts of compulsory and voluntary being interpreted from the point of view of the people protected.

Classification/categorization of social benefits

Social security functions covered

The function of a social benefit refers to the primary purpose for which social protection is provided, irrespective of legislative or institutional provisions.

The functional classification of a scheme's benefits is determined by their *purpose* and not by the main field in which the scheme operates. For instance, an Old age pension scheme can grant benefits that should be classified under the Survivors or Family/children functions. The function of a benefit should not be confused with the personal situation of its recipient: a widow may receive an unemployment benefit or a retired person may be given a housing benefit. Likewise, particular types of goods and services may be granted in connection with several functions, depending on their purpose. Home care is an example.

Several classifications by functions co-exist as well established classification in various organizations (Eurostat, OECD, ILO, IMF. Some bridges from one to the other are possible as far as detailed information on the specific benefits included in each function is available)

The identification and comparison of existing classification is part of the work to be carried out in order to meet the objective of agreed classification and categorization of schemes and benefits which would enhance compatibility and comparability.

As a few examples:

A. **The ILO** use an extended operational definition of social security (extended as compared to the scope of Convention 102, including ten elements:

- (1) *medical care* (Part II of Convention No. 102 and by Convention No. 130);
- (2) *income support in the form of cash sickness benefits*(Part III of Convention No. 102 and Convention No. 130);
- (3) protection in *disability*, including income support but also medical care, rehabilitation and long-term care – income support invalidity benefit (Part IX of Convention No. 102 and Convention No. 128);
- (4) protection in *old age*, including income support and long-term care (Part V of Convention No. 102 and by Convention No. 128);
- (5) protection of *survivors* in case of death of a family member (“breadwinner”) (Part X of Convention No. 102 and by Convention No. 128);
- (6) protection in *maternity*, including medical care and income support maternity benefit(Part VIII of Convention No. 102 and by Convention No. 183);
- (7) protection in “*responsibility for the maintenance of children*”, including the provision in kind to, or in respect of, children, of “food, clothing, housing, holidays or domestic help” and of cash income support family benefits(Part VII of Convention No. 102);
- (8) protection in *unemployment*, including income support in the form of unemployment benefits, and also other labour market policies promoting employment – income support benefits (Part IV of Convention No. 102, and income support and other labour market policies as defined by Convention No. 168);
- (9) protection in case of *employment injury*: medical care, rehabilitation and income support in the form of sickness, invalidity or survivors’ benefit (Part VI of Convention No. 102 and Convention No. 121);
- (10) general protection against poverty and social exclusion through social assistance that provides protection to all residents without sufficient other means of income from work and not covered(or not covered sufficiently) by social security branches listed above; and
- (11) Housing (to be in line with ESSPROS classification)

There are at least three other international classifications of the scope of social security that are fully captured by the above extended definition of social security.

European Commission: In its European System of Integrated Social Protection Statistics (ESSPROS), EUROSTAT defines eight functions of social protection (European Commission,2008):

- (1) sickness/health care;
- (2) disability;
- (3) old age;
- (4) survivors;
- (5) family/children;
- (6) unemployment;
- (7) housing;
- (8) social exclusion not elsewhere classified.

This classification adds two functions not covered explicitly by ILO Conventions but included in the ILO extended operational definition:

- The housing function
- The social exclusion not elsewhere classified function includes all other benefits, mainly of the social assistance type, not referring to any clearly identifiable risks or needs covered by other functions but targeted at the “socially excluded” or “those at risk of social exclusion”.

Organization for Economic Co-operation and Development (OECD)

For the purposes of its SOCX database (OECD, 2009a)and similar to the European Commission, the OECD has adopted the following classification of nine policy areas in social protection:

- (1) old age;
- (2) survivors;
- (3) incapacity related;
- (4) health;
- (5) family;
- (6) active labour market programmes;
- (7) unemployment;
- (8) housing;
- (9) other social policy areas.

The main difference from the EU classification is that the OECD adds labour market programmes not covered by the core ESSPROS database.

United Nations

The above two classifications are similar to the United Nations Classification of Functions of the Government (COFOG), adopted also by the IMF in its Government Finance Statistics manual of 2001. Under COFOG, however, what is covered by social security or social protection by the ILO, European Union and OECD is split into two separate main functions:

- (1) health;
- (2) social protection.

The social protection main function is then classified into nine categories:

- (a) sickness and disability;
- (b) old age;
- (c) survivors;
- (d) family and children;
- (e) unemployment;
- (f) housing;
- (g) social exclusion not elsewhere classified;
- (h) research and development in social protection;
- (i) social protection not elsewhere classified.

So long as disaggregated data are available (at the individual benefit or at least scheme level) there are no problems in converting data sets from one classification to another.

**Type of benefits:
Cash benefits and
benefits in kind**

A **cash benefit** is a benefit provided in cash such as income replacement and income support benefits, lump-sum payments from provident funds, allowances and other cash payments which are not reimbursements (i.e. which do not require beneficiaries to show evidence of expenditure)

Benefits in kind are benefits granted in the form of goods and services. They may be provided by way of reimbursement or directly.

Sources: [ESSPROS Manual - The European System of integrated Social Protection Statistics \(2012 edition and ILO Social Security Inquiry 2005 Manual\)](#)

Periodicity of benefits

Periodic cash benefits are cash benefits paid at regular intervals, such as each week, month or quarter (e.g. old age pensions) and whose main "raison d'être" is to provide income replacement by restoring, up to a reasonable level, income which is lost by reason of inability to work. In contrast, other cash benefit share generally paid at irregular intervals or once for each occurrence (e.g. funeral grant), whose primary aim is that of providing cash assistance and not of providing income replacement.

Lump-sum benefit: benefits paid or delivered on a single occasion or in the form of a lump-sum.

"**Ad-hoc**" frequency applies to benefits delivered several times but on an irregular basis.

Means-tested or not

Means-tested benefits are benefits that are granted only upon proof of need. Different types of income or assets, such as capital, earnings, benefits and other payments may be taken into account in the aggregate for the purpose of determining whether the applicants are eligible for benefit at all and the amount of benefit which will be granted.

Basic versus

supplementary benefits

Used in particular to limit some risk of double counting for a given function when beneficiaries can get benefits from several schemes. Supplementary benefits are provided in addition to benefits provided by a basic scheme (usual to top-up basic schemes benefits).

Appendix II: First version of the road map of the social protection statistics and indicators inter-agency working group

ISSUES	Short term	Medium term	Long term
General Mapping	<ul style="list-style-type: none"> ○ Mapping of existing data [March 22nd, 2013] ○ Mapping of gaps [March 22nd, 2013] ○ Consolidated mapping shared through the platform and included as part of the report [May 2013]. 		
General Working group	<ul style="list-style-type: none"> ○ Social protection statistics working group TORs: first draft to be sent before June. 	<ul style="list-style-type: none"> ○ Consolidated version of the TORS for the groups and first sub-groups consolidated for August 2013 Constitution/1st meeting of the sub-working groups → Before the end of 2013. 	
General Communication	<ul style="list-style-type: none"> ○ E-platform: resources sharing (link to provide next week: GESS workspace) [March 22nd, 2013]. ○ E-mailing list to consolidate (all people invited, whether they attended or not) [March 22nd, 2013]. 	<ul style="list-style-type: none"> ○ Teleconference/Skype conference/webinar every 2 months. ○ Meeting once a year on a specific issue (first one in September on household surveys)/ 	
Issues			
ISSUE 1: How to define and categorize social protection data to enhance comparability among international organizations	<ul style="list-style-type: none"> ○ Constitution of a small group (WB/ILO) work responsible for suggestions to be shared on relevant categories to be used to define/classify individual core data. [Expression of interest received from several organizations]. 	<ul style="list-style-type: none"> ○ Identification of the various classifications used by main organizations (further work based on the consolidated mapping of existing data collected by international organizations) (WB, ILO, ISSA, ADB, OECD, Eurostat, etc.). ○ Identification of the “set of categories” which allows to rebuild all existing classifications used in international organizations. Bridges (i.e. translation from one classification to the other, ability to go across classifications). Product: Note with main existing classifications used in organizations, “bridges” to go from one to the other as well as bottlenecks [Expression of interest received from various organizations and deadline to be fixed]. 	<ul style="list-style-type: none"> ○ Ultimate objective of standardization of social protection terminology and classifications & harmonization of international data collection. ○ Test in countries (pilot country project) Meeting/Conference with countries.

ISSUES	Short term	Medium term	Long term
		<ul style="list-style-type: none"> Dressing of first list of terms that need to be defined and agreed on and dissemination [October, 2013]. 	<ul style="list-style-type: none"> Product: Common Guidelines Manual with all organizations logos (option for a modular publication which would allow a progressive and flexible approach by adding the elements of the series of guidelines as part of a Global volume of “Common Guidelines” for statisticians.
ISSUE 2: Core set of data on social protection?	<ul style="list-style-type: none"> Suggestions to be shared on relevant data (and associated definition) to be included in a minimum set of “core” data on social protection [Expression of interest received from several organizations]. Identify current main disaggregation (based on consolidated mapping). 	<ul style="list-style-type: none"> List terms to be defined: each organization collect data with an associated definition to be provided (deadline to be proposed). Identify needs for improvement in the definition, precision of data collected as well as limitations due notably to data quality, data availability and other factors (deadline to be proposed). Agreement on a first set of core social protection data. Agreement on main disaggregation (does not necessarily mean that data are available in countries but role of awareness raising and progressive improvement both in terms of quality and availability). Starting from a Minimum core set, there is a need for principles to then extend the core set. Discussion and agreement on these basic principles. 	<ul style="list-style-type: none"> Product: Input for the modular Global volume of “Common Guidelines” for statisticians.
ISSUE 3: How to improve social protection data collection through household surveys?	<ul style="list-style-type: none"> Define objectives of the workshop [WB/ILO and expression of interest received from several other organizations] [June 2013]. 	<ul style="list-style-type: none"> Stock taking of what exists – internal review in each concerned organization/review of existing social protection questions; tools, practices [July-September 2013]. 	<ul style="list-style-type: none"> Product: Specific guidelines. Product Input for the modular Global volume of “Common Guidelines” for statisticians.
ISSUE 4: Coverage statistics: data & measurement [contribute to ISSUE 2]	<ul style="list-style-type: none"> Take stock of current practices: data collected by international and regional organizations (inputs from the consolidated mapping as reproduced in this document). 	<ul style="list-style-type: none"> WG workshop on HHS [October 2013] (host WB) Based on the analysis of current practices (data collected and available indicators) made available through the mapping, identify: Gaps in data collection & reasons (availability, quality issue or absence of data collection at the international level); Needs for additional definitional and methodological work; Overlaps or needs for harmonisation (to be linked to Overlaps); Development of agreed methodologies to measure 	<ul style="list-style-type: none"> Product Part of series of guidelines. Product Input for the modular Global volume of “Common Guidelines” for statisticians.

ISSUES	Short term	Medium term	Long term
ISSUE 5: Qualitative information, including contextual information	<ul style="list-style-type: none"> ○ Sub-group to be created [Expression of interest received from several organizations, including ISSA, ILO, WB, ECLAC]. ○ Some examples (Eurostat/CIRCA, ISSA, OECD, ECLAC, etc) made available through the work space [Starting from 15 April 2013 and ongoing]. ○ Identification of broad categories of qualitative information to be discussed and agreed for further work in sub-groups [2013, deadline to be defined]. 	<p>coverage based on benefits/risks covered.</p> <ul style="list-style-type: none"> ○ Broad categories of qualitative information defined Global inventory of main social protection schemes and programmes (including labour market programmes) for a number of countries. Countries selected to be defined [WB/ILO and any other organizations interested]. ○ List of main information (& sources) under each category available for dissemination among the group for discussion. 	<ul style="list-style-type: none"> ○ Product Part of the series of guidelines. Product Input for the modular Global volume of “Common Guidelines” for statisticians.
ISSUE 6: How to treat subsidies	<ul style="list-style-type: none"> ○ Sub-group to be created [Expression of interest received from several organizations, including WB, UNICEF, FAO, ECLAC]. ○ Share experience and current existing practices (FAO, OECD, World Bank and others). ○ Identify the various types of subsidies (food; consumption; price, production, education; health subsidies) and try to come with broad categories. 	<ul style="list-style-type: none"> ○ Quantitative elements for policy dialogue: Study on distributional effects of subsidies versus social benefits (cash) [To be possibly decided by the sub-group]. 	
ISSUE 7: How to define poverty or to fixed poverty threshold for different age group [older persons notably]	<ul style="list-style-type: none"> ○ Current ongoing activity between Helpage and the World Bank on poverty data (particularly relating to old age). The objective, a possible sub-group is to draw on this ongoing existing initiative, benefit from feedback as it develops and contribute to its development. Identify main existing and take stock of existing measures of poverty and current practices among organizations. 	<ul style="list-style-type: none"> ○ Presentation of measures and definition and critical analysis of current practices. 	
ISSUE 8 Sources of financing (link to ISSUE 2), in particular non-contributory financing disaggregation	<ul style="list-style-type: none"> ○ Disaggregation/ qualification of sources of financing of non-contributory programmes (to be consistent with sources of financing of other programmes) Sub-group to be created [Expression of interest received from several organizations, including ECLAC, Helpage, ILO, ISSA, UNICEF] Consider as a starting point existing classifications 	<ul style="list-style-type: none"> ○ To be organized by the subgroup. 	

ISSUES	Short term	Medium term	Long term
<p>ISSUE 9 What other organizations should be part of the group?</p>	<p>(their limitations and ways for improvement). The ESSPROS methodology should be considered. Questions: Tax financed: what kind of tax? How to disaggregate? Earmarked taxes and others? Donor financed/general taxes How do we account for loans? Loans vs. grants (often classified as government but they're different from general tax revenue) The work should be linked to the work of the UK Overseas Development Institute (which several international organizations have been part of) and the DAC should be part of the discussion.</p> <p>○ Improve integration of regional organizations; Africa/Middle East: identify organization(s) Latin America: <u>Inter-American Development Bank</u> (social protection surveys): how to work together?</p>	<p>○ Notes for possible joint activities in the area of social protection statistics (build on experience).</p>	
Gaps			
<p>GAPS 1: Data and methods for programs targeting persons in active age</p>	<p>○ Labour market programmes: public employment programmes and others Sub-group to be created [Expression of interest received from several organizations, including WB, ILO, WFP, FAO and further call for interest].</p> <p>○ Stock taking of what exists – internal review in each concerned organization (including employment services; training retraining) [end of July]. Stock taking of data and indicators available and produced from major exiting programme.</p> <p>○ Disability: Sub-group to be created starting by identifying which organizations already involved and interested to collect data on social protection and disability should be brought into this discussion. [time frame to be further decided].</p> <p>Cross-cutting issue: identify other organizations to be involved (to open up with WHO).</p>	<p>○ Suggestion of a list of data of indicators which could be collected on a systematic basis Assess existing databases' capacity to take these data on-board (adaptation required).</p> <p>Study areas: Link between disability/old age ASPIRE would like a disability section: check from existing survey data the opportunity for such a section (number of countries with questions with relevant formulation). ILO: analysis of existing data on coverage collected</p>	<p>○ Data on labour market programme as part of regular data collection process [included as part of a data management system ... possibly SSI if adapted].</p>

ISSUES	Short term	Medium term	Long term
GAPS 2: Benefit level – data and measurement	<ul style="list-style-type: none"> ○ Maternity: actually covered by 2 units in the ILO and ISSA. A joint activity is ongoing on effective measurement of maternity coverage and can be extended further. Discuss methodology for possible indicators and work plan[26 March 2013] Any other organization interested? ○ Sickness: Take stock of existing data and indicators (country level? Specific project?). ○ General social assistance. Question: what possible relevant indicators of coverage? ○ Group or sub-groups? Stock taking of current practices and existing data in international organizations including legal information collected systematically by ISSA, OECD, Eurostat or CEPAL as well as indicators of level of benefits effectively received as currently developed notably by WB, ILO, Helpage, Eurostat, OECD, etc. 	<p>through the ILO social security inquiry (suggestion and test of various indicators) Assess quality of data (especially outside OECD countries).</p> <ul style="list-style-type: none"> ○ Stock taking of current practices and existing in countries (notably in Eastern European countries – incl. CIS database) where such information is commonly available. ○ Data to be collected from administrative sources and associated methods Household surveys (example of questions available in existing modules, existing surveys) and associated methods. ○ Model of theoretical assumptions (rules) as developed by the World Bank and OECD. 	<ul style="list-style-type: none"> ○ Product: Benefit levels: data collection and measurement as part of a series of guidelines. Input for the modular Global volume of “Common Guidelines” for statisticians.
GAPS 3: Housing benefits	<ul style="list-style-type: none"> ○ Group or sub-group? Stock taking of current practices and existing data in international organizations but also from countries for housing benefits. Look at types of programmes including under housing in OECD SOCX (detailed programmes); in CIRCA Eurostat qualitative database; in CEPAL housing expenditure. Check with UN-Habitat. 		
GAP 4: Shared micro data repository	<ul style="list-style-type: none"> ○ No realistic. Too many restrictions. 		

ISSUES	Short term	Medium term	Long term
GAP 5: Anticipation of future gaps	○ Not an issue for now but “second generation issue”.		
Overlaps			
OVERLAPS 1: Unemployment data	○ Qualitative data: Intra ILO: two departments/ units in charge of qualitative data on unemployment + ISSA: check how to harmonise internally. Additional needs from the World Bank in terms of qualitative data taking into account existing Doing Business indicators (existence of unemployment protection scheme and of Public Employment Services). Quantitative data: three main sources of data collection: Eurostat, OECD, ILO. Plan a joint discussion to see how to reduce overlaps. Non OECD countries under the responsibility of the ILO?		
OVERLAPS 2: Pension data	○ Identify overlaps & differences between World Bank and ILO data [18-19 March] and discuss will and opportunities to overcome differences and overlaps Overlap for active contributors data. Comparison of data and sources used for harmonisation [18-19 March]. Differences for beneficiaries and expenditure. Discuss respective objectives and plan activities to reduce differences and increase complementarity.	○ Dress a list of respective “strong” contacts and countries respectively in the WB and ILO to split data updates between the two organizations. The list will include countries benefiting from specific projects including a quantitative component. ILO: split of expenditure data by main policy areas.	
OVERLAPS 3: Public social protection expenditure data	○ Most organizations collect/ compile public social protection expenditure data.	○ Based on the Mapping, analyse methods, definitions & identify possible complementarities.	
Capacity building			
Capacity building at the country level	○ List needs for capacity building in countries (context).	○ Identify areas for capacity building in countries Identify existing training materials and methods and develop when necessary training support.	○ Capacity building at the country level.
