**WOMEN ARE FREQUENTLY EXCLUDED FROM HEALTH PROTECTION**

Despite the wish to achieve universal health protection, inequities in access to urgently needed health care prevail for half of the world’s population. Due to gender-biased health schemes and systems, women are often excluded even from the most basic services:

- Coverage in health schemes often requires formal employment where women, particularly in low-income countries, are less likely to work. Thus, coverage rates of women are expected to be much lower than those of men. However, no reliable data at global, regional, or national levels exist.
- Unfair financing mechanisms based on high out-of-pocket payments combined with lower or no income of women compared to men result in high access barriers and impoverishment of women. Currently, no specific policies are known to address these issues using an inclusive and comprehensive policy approach.
- Benefit packages are often not gender specific and service delivery often ignores specific needs of women. As a result, health care might not be acceptable and available for women.

As a result, women are deprived of their human rights to health and social protection and exposed to unnecessary suffering, even death.

Change is possible. Equitable health protection requires inclusive legislation, financial protection, and the employment of sufficient numbers of skilled health workers. It also requires a broader policy framework that addresses gender inequities both within and beyond the health sector, such as in social, economic, and labour market policies.

**IMPROVING WOMEN’S HEALTH PROTECTION**

The Social Protection Floors Recommendation, 2012 (No. 202), offers such a framework. It provides guidance on universal health protection policies that is based on non-discrimination, is responsive to special needs, and has the potential to achieve equity in access to health care. Improving women’s health protection along these lines requires:

- in-depth assessments of root causes of access deficits;
- global, regional, and national evidence of the extent of coverage gaps; and
- country support ensuring inclusive health protection for all women in need.
Following the earthquake in Nepal, women were at high risk. Women’s health protection was already scarce prior to the disaster, but then access to health care was nearly impossible. Costs of essential care – particularly women-specific care – were soaring, facilities were devastated, skilled health workers were missing particularly in rural areas, and the gendered status of women in society created additional problems by often giving men’s needs priority over women’s needs. As a result, thousands of sick or pregnant women had no effective access to the health care they needed. In the absence of data that accurately characterizes the situation, policy-makers might be tempted to continue biased policies that exclude women.

FROM RIGHT TO REALITY WITH YOUR SUPPORT

The ILO and its UN partners have extensive experience working as One to help countries extend social health protection to all people. With your support, we can ensure that more women, men and children across the world are adequately protected.

You can support us to:

- Develop a practical multilingual how-to guide on building universal health protection in close partnership with ongoing countries’ initiatives.
  
  US$ 150,000 over 3 years

- Assess the root causes of women’s access deficits and gender discrimination in health protection by in-depth evaluations.
  
  US$ 300,000

- Close the data gap and provide evidence to policy-and decision-makers regarding key areas of improvement by developing global, regional, and national evidence on the extent of women’s coverage gaps.
  
  US$ 500,000

- Develop guidance on effective and efficient health protection policies that are gender-sensitive and ensure the availability, affordability, and accessibility of quality health care for and financial protection to women.
  
  US$ 300,000

- Facilitate South-South exchanges and training.
  
  US$ 300,000

LISTENING TO YOUR AMBITIONS

As a donor, you receive regular reports on the progress made and have access to ongoing project activities and performance indicators.

To further discuss your objectives and the ways in which you can improve millions of lives, you can contact:
